## John Héydon, a Servant of God, and

 Secretary of Nature.Renes nos undo Tag.

London Printed for Thomas Lock, 1658.

FInding my labors have found fuch kind acceptance, \& fuch good entertainment amongf my honelt Countrey-men, it hath incouraged me this feventh time to write for their benefir, \& although this book may prove fruitlefs to many becaufe not underfood, nor regarded; yet fome few may be of that fpirit, as to comprehend it \& imbrace it, if net openly profefs it, yet fecretly believe it, for upon my foul it is truth, written in love to thofe that are a fflicted with thefe diftempers, commonly called New Difeafes: And I have taken up the Cudgils in defence of my Predeceffor Dr.Culpepper, intending to amend his deficiency in point of Art, or better to finifh where he left off : He befieged the Difeafes, \& I hope I thal ftorm them, \&s caufe the Enemy to fly or yeeld to my medicines; which medicines the Colledge if they pleafe may ufe for the good health of poore Chriftians.

Next I am to advertife you, that no books are printed without forne faults: There is not a writer in the world, but if Critical fools will, theymay find fome fault or other with his writings to carp at. Every man may look into himfelf before he defpifes another; and whofoever he be, let bim either allow or amend anothers writing: I fear no mans rafh cenfure, nor will I plead for the Corrector and Compofitor, the ingenuous have not onely judgment to difcern, but courtefie to pafs by fmall faults. The moft remarkable are thefe following.

## An Apologue for an Epilogue.

IShall here tel you what Rofie Crucians are, and that Mofes was their Father, and he was $\Theta$ :\% maís; fome fay they were of the order of Elias, fome fay the Difciples of Ezekiel, orhers define them to be 'r mis
 oxs; i.e. The Officers of the Generalifimo of the world, that are as the eyes and cares of the great King, feeing \& hearing all things; "they are Seraphically illuminated, as Mofes was according to this order of the Elements, earth refin'd to water, water to air, air to fire; fo of a man to be one of the Heroes of a Heros, a Demon, or good genius, of a genius, a partaker of Divine things, and a companion of the holy company of unbodied fouls and immortall Angels, and according to their zehicles, a verfatile life, turning themfelves Proteus-like into any chape.

But there is yet arguments to proustfe Mr. Walfoord, and mwilliams, Rofe Crucians by eleZtion, and that is the miracles that were done by them, in fight; for it fhould feeme Rofie Crucians were riot only initiated into the Mofaicall Theory, but have arrived alfo to the power of working miracles as Mojes, Eliar, Ezekieland the fucceeding Prophets did, as being tranfported where they pleafe, as Habakkuk was from jewry to Batjlon or as Phalip after be had baptized the Etruch to Reitus, and one of thefe went from me to a friend of mine in Deiorfhire, and came and brought me an anfiver to London the lame day, which is four dayes journey, they taught
me excelent predictions of Afrologic, and earthquakes. they flack the plague in Cityes; they filence the violent winds and tempetts; they calme the rage of the Sca and rivers; they walk in the Air, they fruftrate the Malicious afpect of Witches; they cure all difeafes ; I defired one of thefe to tell me whether my complexion were capable of the fociety of my good Genius? when I fee you again, faid he, I will tell you (which is) (when he pleafes to come to me, for I know not where to go to him ) when I faw him then he faid Ye fhould pray ro God, for a good and holy man cañ offer no greater nor more acceptable facrifice to God, then the oblation of himfelf, his foul.
He faid alfo that the good Genii are as the benigne eycs of God, running to and fro in the world, with love and pitty beholding the innocent endeavours of harmlefs and fingle hearted men, ever ready to do them good, and to help them; and at his going away he bid me beware of my feeming friends who would do me all the hure they could, and caule the Governors of the Nations to be angry with me, and fet bounds to my liberty, which truly hapned to me, as they did indeed : many things more he told me before we parted, but I fhall not name them here.
For this Rofie Crucian Phyfick or Medicines, I happily and unexpectedly light upon in Arabia, which will prove a reftauration of health to all that are afflicted wh that ficknefs, which we ordinarily cal natural, \&all other difeafes, as the Gour, Dropfie, Leprofieand falling ficknefs; and thefe men may be faid to have no fmall infightin the body, and that walfoord, williams, and others $n f$ the Fraternity now living, may bear up in the fame likely Equipage, with thofe noble Divine firits their predecefsors, though the unskilfullinefs in men commonly acinowledge more of fupernaturall affiftance
in hot unferled fancies, and per plexed melancholy, then in the calme and diftizict ufe of reafon; yer for mine own part, but not withour fubmiffion to better judjements, llooke upon thefe Rofie Crucians above all men truly infpired, and more than any that profeffed or pretended them!elves fo , this fixteen hundred yeares, and I am ravifhed with admiration of their miracles and tranfcendent mechanicall inventions, for the falving the Phanomena in the world; I may without offence therefore compare them with Bezaliel and Aboliab, thofe skilfull and cunning workers of the tabernacle, who, as Muses reftifies, were filled with the fpirit of God, and therefore were of an excellent underftanding to find out all manner of curious work.

Nor is it any more argument, that thefe Rofie Crucians are not infpired, becaufe they do not fay they are; then that others are infired, becaufe they fay they are; which to me is no argument at all; but the lupprefion of what fo hapned, would argue much more fobriety \& modefty; whenas the profeffion of it with fober men; would be fulpected of fome peice of melancholy and diftraction, efpecially in thefe things, where the grand pleafure is the evidence and exercife of reafon, not a bare beliefe, or an ineffable fenfe of life, in refpect whereof there is no true chriftian but he is infpired; but if any more zealous pretender to prudence and righteoufnefs, wanting either leafure or ability to examme thefe Rofie Crucian Medicines to the bottom fhall notwithfranding either condemn them or admire them; he hath unbecommingly and indifcreetly vetered out of his own fphere, and $I$ cannot acquit him of injuftice or folly: Nor am I a rofecrucian, nor do I fpeake of fpite, or hope of gain', or for any fuch matter ; there is no caufe, God knows, I envie no man, be he what he will be, $I$ am no phyfitian, never was, nor never mean to be: what $I$ am it
makes no matter as to my profeffion.
Laftly, thee holy and good men would have me know that the greateft fret and perfection of a vertuous foul, is the kindly accomplishment of her own nature, in true wifdom and divine love; and there miraculus things that are done by them are, that that worth and knowledge that is in them may be taken notice of, and that God thereby may be glorified whole witneffes they are; but no other happiness accrues to them from this, but that hereby they may be in a better capacity of making 0 . thess happy,

From my houfe in spittle fields next door to the red Lyon this 10 . of May, John Heysion. 1658.

 <br> <br> Rofle Crucian Pbyfuk.}

CHAP. I.

of the Accurate Strulture of Mays body.

egAdmire the goodnefs of God towards usin the frame and fructure of our bodies, the admirable Artifice whereof, Galen, though a $N a$ turalift, was fo taken with, that he could not but adjudge the honor of a hymn to the wife Creator of it. The continuance of the whole, and every particular, is fo evident an Argument of exquifite skill in the Maker, that if I mould purfue all that futes to my purs pofe, it would amount to too large (yet an entire) Volume. I fhall therefore write all that is needful to be known by all men, leaving the reft to be fupply'd by Anatomists: And I think there is no man that hath any skill in that Art, but will confefs, the more diligently and accurately the frame of our body is examined, it is found the more exquifitely conformable to our Reafon, Judgement, and Defire; fo that fuppofing
the fame matter that our bodies are made of, if it had been in our own power to have made our felves, we fhould have fram'd our felves no otherwife then we are: To inftance in fome particulars; $A_{i}$ in oss Eyes, the Number, the Scitsation, the Fabrick of them is fuch, that we can excogitate nothing to be added thereto, or to be altered. either for their beauty, $\operatorname{lofety}$, or ufefulwefs; but as for their beauty, I have treated largely of it in my youthful merry Poems, \& now am not minded to cranfcribe my tender nice fubjeit, and couple it with my feverer ftile; I will onely note how fafely they are guarded, and firly framed out for the ufe they are intended: The Brow and the Nofe faves them from harder Atrokes; but fuch a curious part as the Eye being neceffarily liable to mifchief from fmalleft matters, the fweat of the Forchead is fenced off by thofe two Wreaths of Hair which we call the-Eye-brows; and the Eye-lids are fortified with little ftiff briftes, as with Pallifadoes, againft the affault of Flyes and Gnats, and fuch like bold Animalcula; befides, the upper-lid prefently claps down, and is as good a Fence as a Port-Cullis againft the importunity of the Enemy; which is done'alfo every night, whether there be any prefent affault or no, as if nature kept Garrifon in chis Acropolis of mans body, the Head, and look'd that fuch Laws fhould be duly obferved, as were molt for his fafety.

And now for the ufe of the Eye, which is fight, ic is evident that this Organ is fo exquifitely framed for that parpofe, that not the lealt curiofity can be added: For firt, the Humor and Tunicles are purely tramparent to let in light, and colours unfouid, and unfophifticated by any inward tincure. And then again, the parcs of the Eye are made cosvex, that there might be a direction of many raies coming from one point of the object, unto one point anfwerable in the bottom of the eye; to which purpofe the Cbryftalline bumor is of great moment, and without which, the fight would be very obfcure and weak. Thirdly, The $T$ unica weve hath a Mufculous Power, and can dilate and centract that round hole in it which is called the Pupil of the Eye, for the better moderating the tranfmiffion of light. Fourthly, The infide
of the wiea is blacked like the Wall of a Tennis-Court, the raies falling upon the Retisa again; for fuch a repercuflion would make the fight more confufed. Fifthly, The $T a-$ mica Arachroides, whichinvellops the Cbryfalline Humour, by vertue of its Proceffus Ciliares, can thrult forward, or draw back that precious ufeful part of the Eye, as the nearnefs or diftance of the objects thall require. Sixthly and laftly, The Tuniga Retina is white, for the better and more true reception of the (pecies of things, (as they ordinarily call them) as white paper is fitteft to receive thofe Images into a dark room; and the eye is already fo perfect, that I believe it is not needful to fpeak any more thereof; we being able to move our head upwards and downwards, and on every fide, might have unawares thought our felves fufficiently well provided for; but Nature hath added Mufcles allo to the Eyes, that no perfection might be wanting; for we have ofs occafion to move our Eyes, our Heads being unmoved, asin reading, and viewing more particularly any object fet before us; and that this may be done with more cafe and accuracy, he hath furnifhed that Organ with no leffe then fix jéveral Mufcles; andindeed, this framing of Mafcles, not onely in the Eye, but in the whole body, is admirable; for is it not a wonder that even all our flefla mould be fo handfomly formed and contrived into diftinct pieces, whofe rife and infertions flould be with fuch advantage that they do ferve to move fome part of the body or other? and that the parts of our body are not moved onely fo conveniently as wil ferve us to walk and fubfitt by, but that they are able to move every way imaginable that will advantage us; for we can fling ouc Legs and Arms upwards and downwards, backwards, forwards, and round, as they that fin, or would fpread a Nole-hill with their feet. To fay nothing of Refpiration, the conftriction of the Diaphragme for the keeping down the Guts, and fo en!arging the Thorax, that the Lungs may have play, and the affiftance of the inward intercoftci Mufcles in deep fufpirations, when we take more large gulps of cir to cool our heart over-charged with love or forrow; nor of the curious Fabrick of the Lainix, fo well fited with Mufcles for

## (4)

the modulation of the Voice, tunable fpeech, and delicious finging: You may adde to thefe the notable contrivance of the Heart, its two ventrisles, and its many valvula, fo fram'd and fcituated, as is moft fit for the reception and tranfmiffion of the blood, and it's fent thence away warm to comfort and cherifh the reft of the body; for which purpofe alfo the valushe in the veins are made.

But we fee by experience that joy and grief proceed not in all men from the fame caufes, and that men differ very much in the conftitution of the body, whereby that which helpeth and furthereth vital conftitution in one, and is therefore delightful, hindereth \& croffeth it in another, and therefore caufech grief. The difference therefore of wits, hath its original from the different paffions, $\&$ from the ends to which the appetite leadeth them. As for that difference which ariferh from ficknefs, and fuch accidental difempers, I have appointed them for the fecond Part of this Book, and therefore I omit the fame as impertinent to this place, and confider it onely in fuch as have their health, perfection of body, and Organs well difpofed.

## CHAP. II.

Of the perfection of the Body, and then of the Nature of the SerSes; of Delight, Paim, Love, Hatred, SemJual Delight, and Pains of the Body, Foy, and Grief.

OTher things I have to fay, but I will rather infift upon fach things as are cafie ahd intelligible even to Idiots, or fuch Pbyficians that are no wifer, who if they can but tell the Joints of their hands, or know the ufe of their teeth, they may eafily difcover it was Counfel not Chance, that created them; and if they but underftand thefe natural Medecines I have prepared in this Book for their example, they will know that they fhall be cured of all Difeafes without pain, or any great coft ; and Loze, not Money, was it that made me undertake this Task. Now of the well-fram'd parts of our bo-
dy, I would know why we have chree oints in our Legs and Arms, as alfo in our fingers, but that it was much better then having but two, or four? And why are our fore-teeth 乃barp, like Chizzels, to cut, but our inward teeth broad, to grind? but this is more exquifite then having them all fharp, or all broad, or the fore-seeth broad, and the other fharp; but we might have made a hard fhift to have lived, though in that worfer condition. Again, Why are the Teeth fo luckily placed? or rather, Why are there not Teeth in other bones as well as in the Jaw-bones, for they might have been as capable as thefe But the reafon is, Nothing is done foollihly, nor in vain. I will hhew you bow to prolong life, and to return from age to youth; and how to change, alter, and amend the state of the body; but that I intend in a Treatife entituled The Wife Maxs Crown: To keep the body in perfect bealth is my prefent defign, and to cure allDifeajes withost yeward; for there is a Divine Providence that orders all things. Again, (to fay nothing of the inward curiofity of the $E a r$ ) Why is that outward frame of i , but that it is certainly known that it's for the bettering of our bearing?

I might add, That Nature hath made the hind-moft parts of our body (which we fit upon ) moft flefby, as providing for our eafe, making us a Natural Cubion, as well as for Inftruments of Motion for our Thighs and Legs; The harh made the hinder part of the Head moreftrong, as being otherwife unfenced againft falls and other cafualties. She hath made the Backbone of feveral Vertebr,, as being more fit to bend, more tough, and lefs in danger of breaking then if they were all oneintire bone, without thofe grifly Junctures. She hath ftrengthened our fingers and toes with Nailes, whereas the might have fent out that fubftance at the end of the firft and fecond Joints, which had not been fo handfom and ufeful, nay, rather fomewhat troublefome and hurtful. And laftly, She hath made all bones devoid of fenfe, becaufe they were to bear the weight of themfelves, and of the whole body; and therefore if they had had fenfe, our life had been painful continually, and dolurous.

And now I have confidered the fitnefs of the parts of mans bodie for the good of the whole, let me bat confider briefly his fences and his nature, and then I intend more folidly to demonftrate the caufe of all Difeales, and with that the Cure, becaule I intend a Method of Rofie Crscian Pbyjek. promifed in my way to Bliffe. By our feveral Organs, we have feveral Conceptions of feveral qualities in the objects: for by fight we have a conception or image compofed of colour and figure, which is all the notice and knowledge the object imparteth to us of its nature, by the excellency of the eye. By Hearing we have a conception called Somnd, which is all the knowledge we lave of the quality of the object from the Ear: And fo the reft of the Sences are alfo conceptions of feveral qualities or natures of their objects.

Becaufe the Image in vifion confifting of colour and fhape, is the knowledge we have of the qualities of che object of that Sence, it is no hard matter for a man to fall into this opinion, That the fame colour \& Thape are the very qualities themfelves; and for the fame caufe chat found \& noife are the qualities of a piece of Canon or Culvering charged with sulphurous Powder, fired, or of the Air: And this opinion hath been fo long received, that the contrary muft needs appear a great Paradox. The fame qualities are eafier in a bell; and yet the introduction of fpecies vifible and intelligible, (which is neceffary for the maintenance of that opinion) paffing to and fro from the object, is worfe then any Paradox, as being a plain impofsibility. I thall theretore endeavor to make plain thefe points.

That the fubject wherein colour and image are inherent, is not the object or thing feen.

That there is nothing (really) which we call an Image or Colour.

That the faid Image, or Colour, is but an apparation unto us of the motion, agitation, or alteration, which the object worketh in the brain, or fpirits; or fome internal fubftance of the Head.

That as in vilion, fo alfo in conceptions that arife from the other fenfes, the fubject of their inherence is not the object, but the continent.

That conceptions and apparitions are nothing really, but motion in fome internal fubftance of the Head, which motion not ftopping there, of neceffity muft there either help, or hinder the motion which is called Vital; when it helpeth it is called Delight, Contentment or Pleafure, which is nothing really but motion about the beart, as conception is nothing but motion in the bead; and the objects that caufe it are called Pleafant, or Delightful; and the fame Delisht, with reference to the object, is called Love; but when fuch motion weakneth or hindreth the vital motion, then it is called Pain, and in relation to that which cauferh it, Hatred.

There are two forts of pleafures, whereof one feemeth to affect the corporeal Organ of the fence, and that I call fenfual, the greateit part whereof is that by which we are invited to give continuance to our $\int$ pecies; and the next by which a man is invited to meat, for prefervation of his individual perfon. The other fort of Delight is not particularly any part of the body, and is cailed The Delight of the mind, $\&$ is that which we call Joy. Likewife of pains, fome affect the body, and are therefore called The-pains of the body; and fome not, and thofe are called grief.

## CHAP. III.

Of the nature of the Soul of Man, whether So be a meer Modification of the body, or a Subfance really diftinct; and thea whether corporeal, or incorporeal, and of the temper of the bodie.

HEre I am forced to Speak what I have in my Familiar Spirit, and it is not impertinent to my purpofe; therefore if we fay that the foul is a meer modification of the body, the foul chen is but one univer fal aculty of the body, or a many faculties put togecher, and thofe operations which are ufually attributed unto the foul, muft of neceffity be attributed unto the body : I demand therefore, To what in the body will you atrribute pontneous motion? I underfand thereby a pow-
er in our felves of wagging, or holding fill moft of the parts of our body; as our band fuppofe, or little finger: If you will fay that it is nothing but the immiffon of the /pirits into fuch and fuch Mufcles, I would gladly know whaz does immit thefe /pirits, and direct them fo curioufly; is it themfelves? or the brains? or that particular piece of the brain they call the Pine-Kersel? What ever it be, that which doth thus immir them, and direct them, muft have Animadverfion; and the fame that hath Animadverfion, hath Memory and Reafon alfo: Now I would know whether the firitits themfelves be capable of Animadverfon, Memory, and Reafon; for it indeed feems aitogether impoffible; for thefe animal jpirits are nothing elfe buc matter very thin and liquid, whofe nature confifts in this, that all the particles of it be in motion, and being loofe from one another, frigge and play up and down according to the meafure and manner of agitation in them.

I therefore demand which of thefe particles in thefe fo many loofly moving one from another, hath Animadverfien in it? if you fay that they all put together have, I appeal to him that thus anfwers, how unlikely it is that that fhould have Animadver $j$ icn that is fo utterly uncapable of Memory, and confe juently, of Reafon; for it is impofsible to conceive memory competible to fuch a fubjet, as it is how to write Cbaracters in the Water, or in the Wind.
If you fay the Brain immits and direts thefe fpirits; how can that fo freely and /pontancoufly move it feff, or another, that hath no Mufcles? Befides Dotor Culpepper tells you that though the Brain be the inftrument of Sence, yet it hath no ferfe at all of it felf, how then can that that hath no fence direct thus /pontancoufly and arbitrariounly, the animal /perits in to any part of the body ? an Act that plainly requires determinate Senfe and percepticn: But let the Pbyficians and Anatcmifts conclude what they will, I hall, I think, little leffe then demonftrate that the brains bave so fense; for the fame in us that hath fence, hath likewife animadier fioa; and that which bath animsadverfoon in us, hath alfo a faculty of free and arbitrarious Fancy and Reafon.

Let us now confider the nature of the train, and fee how competible thofe alterations are to fuch a fubject; verily if we take a right view of this Laxe pith or marrow in mans head, neithet our fence nor underftanding can difcover any thing more in this fubflance that can pretend to fuch noble operations, as free imagination and fagacious collections of Reafon, then we can difcern in a lump of fat, or a pot of boney; for this loofe pulpe that is thus wrapped up within our Cranium, is but a fpongie and porous bo$d y$, and pervious, not onely to the animal /pirits, but alfo to more Jnice and Liquor; elfe it could not well be nourifhed, at leaft it could not be fo foft and moiftned by drunkesnefs and excefs, as to make the underftanding inept and fottifh in its operations. Wherefore I now demand, in this fofe fubftance which we call the brain, whofe foftnefs implies that it is in fome meafure liquid, and liquidity implies a feveral motion of loofened parts; in what part or parcel thereof does Fancy, Reafon, aid Aximadverfion lie? Inthislaxe confiftence that lies like a Net, all ox beaps in the water; Idemand, Is what Knot, Loope, or Interval thereof, does thisfaculty of free Fancy, and active Reafon refide? I believe not a Doctor in England, nay, not Dr. Cwlpepper himfelf, were healive, nor his men, Doctor Freeman, and the reft, can af fign me any; and if any will fay, in all together; they muft fay that the whole brais is figured into this or that reprefentation, which would cancel memory, and take away all capacity of there being any diftinct notes and places for the feveral feecies of things there prefented. But if they will fay there is in every pare of the brain this power of Animadverfion and Fancy, they are to remember that the brain is in fome meafure a liquid body, and we muft enquire how thefe loofe parts underftand one anothers feveral Animadverfions and notions; and if they could (which is yet very unconceivable) yet if they could from hence do any thing toward the immisfon and direction of the animal/pivits into this or that part of the body, they muft do it by knowing one anothers minds, and by aioint contention of frength, as wher many men at once, the word being given when they weigh Anchor, put their ftrength together for the moving of that Maffie body, that the fingle ftrength of one could not deal with; but this is to make the feveral particles of the brain fo many indivi-
daal perfons; a fitter object for laughter, then the leaft meafure of belief.

Befides, how come thefe many Animadverfions to feem but one to us, our mind being thefe, as is fuppofed? Or why if the figuration of one pare of the brain be communicated to ail che reft, does not the fame object feem fituated both behind us, and before us, above, and beneath, on the right hand and on the left; and every way, as the imprefs of the object is reflected againft all the parts of the brains? but there appearing to us but one animadverfion, and one fight of things, it is a fufficient Argument that there is but one; or if there be many, that they are not mutually communicated from the parts one to a nother, and therefore there can be no fuch joint endeavor towards one defign, whence it is manifelt, that the braixs cannot immit or direct thefe animal fperits into whas part of the body they pleare.

## CHAP. IV.

Of Spontaneous Motion; of the External Pheromena; of the nature of the Effence of the Soul her Ielf, what it is, and whetber it be corporcal, or incorporeal.

NOW I muft tell you, that the brain hath nofenee, \& therefore cannotimprefs /pantameonfly any motion on the animal/pirits; it is no flight Argument that fome being diffected, have been found without brains; and this I faw, a Captaix in Cbrigey, in Arabia, that was accidentally kill'd by an Alcade, and an Arabian, the ftory is pleafant, but not percinent to our purpofe; but this man had nothing but a limpid water in his head inftead of brains, and the brains generally are eafily diffolvable into a watery confiftence, which agrees with what I intimated Before. Now I appeal to any free Judge, how likely thefe liquid particles are to approve themfelves of that nature and power, as to be able by erecting and knitting themfelves together for a moment of time, to bear thernfelves fo, as with one joint consention of frength, to caufe an arbitrarious obligation of the
the fpirits into this or that determinate part of the $b$ ody; but the abfurdity of this I have fufficiently infinuated already,

The Nerves, I mean the Marrow of them, which is of the fame fubfance with the brain, have no fence, as is demonftrated from a Catalepfie, or Catochus; but I will not accumulate Arguments in a matter fo palpable. As for that little fprunt piece of the brain which they call the Conacion, that this Thould be the very fubftance, whofe natural faculty it is to move it felf, and by its notion and nods to determine the courfe of the /pirits into this or that part of the body, feems to me no lefs foolifh and fabulous then the Storie of this entituled Doctor Frecman, fo much commended by ignorantly innocent people: If you heard but the magnificent forie that is told of the little lurking Mubrome, how it does not onely bear and /ee, but imagines, reafons, conmands the whole fabrick of the body more dexteroully then an Indian Boy does an Elephant: whatan acute Logician, fubtile Geometrician, prudent Staiefman, skilful Phy/ician, and profound Pbilo oppher he is! and then afterwards by diffection you difcover this worker of miracles to be nothing but a poor filly contemptible $K$ nob, or Protuberancy, confifting of a thin Mem: brane, containing a little pulpous matter, much of the fame nature with the reft of the Brain,

> Spectatum admi fsi rifum teneatis awici?

Would you not fooner laugh at it, then go about to confute it? and truly I may the better laugh it now, having already confuted it in what I have afore merrily argued concerning the reft of the Brain.

I Thall therefore make bold to conclude, That the imprefs of Spontaneoss Motion is neither from the anmal /pirits, nor from the Brain, ofc. therefore that thofe operations that are ufually. attributed unto the forl, are really incompetible to any part of the body; and therefore, as in the laft Chapter I hinted, I fay, That the foul is not a meer modification of the body, but a fabflance diftinct therefrom.

Now we are to enquire, Whether this fubftance difinct from what we ordinarily call the body, be alfo it felf a Corporeal Subfance, or whether it be ixcorporeal? If you fay that it is a corporeal fubftance, you can underftand no other then matter
more fubtile and tenuious then the animal fpirits themfelves, mingled with them, anddifperfed through the veffels and porofities of the body; for there can be no penetration of dimenfions: Bat I need no new arguments to coniute this fond conceit; for what I faid of the ani nal fpirits before, is applicable with all eafe and fitnefs to this prefenteafe; and let it be fufficient that I advertife you fo much, and fo be excufed from the repeating of the fame things over again.

It remains cherefore chat we conclude, That that which impreffes spontaneous $M$ ation upon the body or more immediately upon the animal /pirits: That which imagines, remembers, and reafons, is an immaterial fublance, diftinct from the body, which ufes the animal /pirit sand the brain ior iaftruments in fuch and fuch operations. And thus we have found a pirit in a proper notion and fignification, that hath apparently thefe faculties in it, it can both underitand and move corporeal matter.

And now this prize chat wa have won will prove for our defign in this new Mechod of Phyfick and Philofophy of very great confequence; for it is obvious here to obferve chat the foul of
 her fubltance is a folid Efigies of God; and therefore as with eafe we confider che fubftance and motion of the valt Heavens on a litti: Spbere, or Tlobe, fo we may with like facilicy contemplate the nature of the Almighty in this litele Aodel of God, the forl of Mans, enlarging to Intinity what we obferve in our felves when we transfer it unto God, as we do !magine thefe Circles which we view on the Globe, to be valtly bigger while we fancy them as defcribed in the beaveas.

Wherefore we bengaffured of this, That chere is a fpiritual fubftance in our felves, in which both thefe properties do refide, wiz. of the underltanding, and of moving the corporeal matter; let us but enlarge our minds to as to conceive as well as we can of a fpiritual fubitance that is able to move \& actuate all matter whatfoever, never fo far excended, and after whatway \&manner foever it pleale, and that it hath not onely the knowledge of this or that particular thing, but a ditinct and plenary cegnizance of all things; and we have iadeed a very competent apprehen-
fion of the natare of the eternal and invifible God, who like the foul of mas, does not indeed fall under fence, but does everywhere operate fo, that his perfon is eafily to be gathered from what is difcovered by our outward fences.

## CHAP. V.

Of Piants; that the meer mation of the matter may do fomething, yet it will not anosent to the production of Plants.' That it is no botch in Nature ibat fome Phenomena be the refults of Motion, others of fubjtantial forms. That beanty is not a meer fancy, and that the beas:y and veriue of Plants is an Argument that they aremade for the. ife of oar bodies frow an intellectua! prineiple.

HOW weak is CMin if you confider his nature, what faculties he hath, and in what order he is in refpect of the relt of the crestures? And indeed, though his body be buc weak and difarm'd, yec his inward abilities of Reafon, and artificial contrivance, is admirable, boch for finding out chofe fecret Medicines which God prepared for the ufe of Min in the Boroe's of the Earth, of Piants and Minerals.

And firit of Vegets'les, where I fhall touch onely thefe four heads, their form and beauty, their .eed, their ignature', and their great ufe, as well for medicines as fusfensuce; and that we may the better underitand the advantage we have in this clofer contemplation of the works of asture, we are in the firft place to take notice of the condition of the fubltance, which we call matter, how fluid and $\operatorname{li} p p e r y$, and undecerminate it is of it felf; or if is be hard, how unfit it is to be changed into any thing elfe; and therefore all things rot into a moifture before any thing can be generated of them, as we foften the waxbefore we fet on the feal:

Now therefore, unlefs we will be foolifh, as becaule the uni, form mocion of the Air, or fome more fubcil corpareal Element, may fo equally comprefs or bear againt the parts of a little vaporous mijfure, as to form it into round drop; (as wie fee in theden, andocherjexperiments) and therefore becaufe this
more rude and generalmotion can do fomerhing, to conclude that it does all things; We muft in all reaton consefs that there is an eternal Mind and Vertue, whereof the matter is thus ufefully formed and changed.

But meer rude and undirected motion, becaufe naturally it will have fome kind of refults, that therefore it will reach to fuch as plainly imply a wife contrivance of counfel, is co ridicalous a Sophifm, as I have already intimated, that it is more fit to impofe upon the inconfiderate Jouls of foul \& children, then upon men of Mature Reaion, and well exercifed in Phelojopby, or the grave and well practifed, feraphically ituminated Refie Crucians. Admit that Rain, and Snow, and Wind, and Harl, and Iee, and Ihusder, and Lightning, and a Star I mention for example, that may be let in amonglt Meteors, by fome called Hellens-ftar, and is well known at Sea; I have feen it melt Copper Veffels a-board a fhip; it cometh of an heap of fuch vapors as are carryed by violent crofs Winds up from the Earth; and fuch like Meteors may be the products of beat and cold, or of the motion and reft of certain fmall particles of the matter; yet that the ufeful and beatiful contrivance of the Branches, Flowers, and Fruits of Plants hould be fo too, ( to fay nothing yet of Minerals, and the bodies of men) is as ridiculous and fupine a collection, as to infer, That becaufe meer heat and cold does foften and harceen Wax, and puts it into fome fhape or other, that therefore this meer heat and cold, or Motion and Reft, without any Art and Direction, made the Sili er Seal too, and graved upon it fo curioully fome Coate of Arms, or the fhape of fome Bird or Bealt, as an Eagle, a Lyon, orc. nay indeed this inference is more tolerable far then the other, thefe effects of Art being more eafie, and lefs noble then thofe other of nature.
Nor is it any deficiency at all in the.Works of Nature, that fome particular Pbanomena be but the eafie refults of that general motion communicated unto the matter fromGod; others the effects of more curious contrivance, or of the Divine Arl, or Reafon, (for fuch are the $\lambda$ ízos wespuatixoi, the Rationes Seminales) incorporated in the Matter, efpecially the Matter it felf being in fome fort vital, elfe it would not continue the motion that it is put upon, when it is occafionally this or the other way mo-
ved; and befides the Nature of God Seing the mof perfect fuinefs of life that is poffibly conceiveable, it is very congruous that this outmolt and remotelt fhadow of himfelf, be fome way, though but obfcurely vital: Wherefore things falling off by degrees from the higheft perfection, it will be no uneven or unproportionableftep, if defcending from the top of this utmolt Creation, Man, in whom there is a more fine conception, or reflexive Reafon, which hangs on, as every man hath fo much experience as to have feen the $S_{z i n}$, and other vifible objects by rellexion in the Water and Glaffes and this as yet thall be all I will fay for this reafon; I will give you more then I promifed in the Contents, by four propofitions concerning the nature of conceptions, and they fhall be proved; and alfo of the main deception of Sence, that Colour and Image may be there where the thing feen is not : Buc becaufe it may be faid, That notwithftanding the Image in the Water be not in the object, but a thing meerly phantaftical, yet there may be colours really in the thing it felf, I will urge further this experience, That divers times men fee directly the fame object double, as two Candles for one, which may happen from diftemper, or otherwife without diftemper if a man will; the Organs being either in their right temper, or equally diftempered, the colours and images in two fuch characters of the fame thing, cannot be inherent therein, becaufe the thing feen cannot be in two places.

One of thefe Images therefore is not inherent in the Obje汭 but the feeing, the Organs of the fight are then in equal terrper or diftemper, the one of them is no more inherent then the other, and confequently, neither of them both are in the Objects, which is the firft propofition mentioned in the precedent number.

Secondly, that the Image of any thing by reflexion in a glafs,' or water, or the like, is not any thing in, or behind the glafs, or in, or under the Water, every man may grant to himfelf; which is the fecond propolition of Des Gartes. For thirdly, We are to confider, firlt, That every great agitation or concuffion of the brain (as it happeneth from a ftroke, efpecially of the ftroke be upon the eye ) whereby the Optick Nerve fuffereth any great violence, there appeareth before the Eyes a certain
lisht, which light is nothing without, but an apparition onely, all that is real being the concuflion or motion of the partsof the Nerve; from which experience we may conclude, That apparition of light is really nothing but motion within. If therefore from Lucid bodies there can be derived motion, fo as to affect the Optick Nerve in fuch manner as is proper thereunto, there will follow an Inage of light fome-where in that line by which the motion was latt derived to the eye, that is to fay, In the object, if we look directly onit, and in the Glafs or Water, when we look upon it in the line of reflexion, which in effect is the third propofition, namely, That image and colour is but an apparition to us of that motion, agitation, or alceration, which the object worketh in the brain or fpirits, or fome internal fubftance in the head.

But that from all lucid, fhining, and illuminate bodies, there is a motion produced to the eye, and thorow the eye, to the Optick Nerve, and fo into the Brain, by which the apparition of light or colour is effected, is not hard to prove. And firf, it is evident that the Fire; the onely lucid body here upon Earth, worketh by motion equally every way, infomuch as the motion thereof ftopped or inclofed, it is prefently extinguifhed, and no more fire. And further, That that motion whereby the fire worketh, is dilation and contraction of it felf alter nately, commonly called Scintillation, or glowing, is manifeft alfo by experience; from fuch motion in the fire muft needs arife a rejection, or cafting from it felf off that part of the medium which is contiguous to it, whereby that part alfo rejecteth the next, and fo fucceffively one part beateth back another to the very cye, and in the fame manner the exteriour part of the eye preffech the interiour, ( the Laws of refraction fill obferved.) Now the interior coat of the eye is nothing elfe but a piece of the Optick Nerve, and therefore che motion is ftill continued thereby into the Brain, and by refifance or re-action of the Brain, is alfo a rebound into the Optick Nerve again, which we not conceiving as motion or rebound from within, do think it is without, and call ii Light, as hath been already thewed by the experience of a froake: We have no reafon to doubt that the Fountain of Light, the Sun, worketh by any other ways then the Fire, at leaft
in this matter; and thus all vifion hath its original from fuch motion as is here defcribed; for where there is no light, there is no fight; and therefore colour mult be the fame thing with light, as being the effect of the lucid bodies, their difference being onely this, That when the light cometh directly from the Fountain to the eye, or indirectly by reflexion from clean and polite bodies, and fuch as bave not any polite bodies, and fuch as have not any particular motion internal to alter it, we call it light; but when it cometh to the eye by reflexion from uneven, rough, and courfe bodies, or fuch as are affected with internal motion of their own that may alter it, then we call it Colour; colour and light differing onely in this, that the one is pure, and the other perturbed light; by that which hath been faid, not onely the trath of the third propofition, but alfo the whole manner $\mathrm{o}_{\mathrm{f}}$ producing light and colour, is apparent.

As colour is not inherent in the object, but an effect thereof upon us, caufed by fuch motion in the object as hath been defcribed, fo neither is found in the thing we hear, but in our felves: one manifeft fign thereof, is, That as man may fee, fo alfo he may hear double \& trebble by multiplication of Ecchoes, whick Ecchoes are founds as well as the Original; and not being in one and the fame place, eannot be inhereat in the body that maketh them; nothing can make any thing which is not in it felf; the Clapper of a Bell hath no found in it, but motion, and maketh motion is the internal parts of the Bell; fo the Bell hath motion and not found, that imparteth motion to the air; and the aire hath motion, but not found; the air imparteth motion by the eas and nerve unto the Brain; and the Brain hath motion, but not found; from the Brain it reboundeth back into the Nerves outward, and thence it becommeth an Apparition without, which we call found. And to proceed to the reft of the fences, it is apparent enough, that the fmell and tafte of the fame thing are not the fame to every man, and therefore are not in the thing frolt or tafted, but in the men; fo likewife the heat we feel from the fire is manifeftly in us, and is quite different from the heat which is in the fire; for our heat is pleafure or pain. aecording as it is great or moderate; but in the cool there is no fuch thing: By this the laft is proved, viz. that as in vifion,
foalfo in Conceptions that arife from other fenfes, the fubject of their inherence is not in the object, but in the Sentinent; And from hence alfo it followeth that whatfoever accidents or qualities our fences make us think there be in the world, they be not there, but are feeming and apparitions only; the things that really are inshe world without us, are thofe motions by which thefe feemings are caufed; and this is the great deception of fence, which allo is to be by fence corrected: for as fence telleth me when I fee directly, that the colour feemeth to be in the object; fo alfo fence telleth me when I fee by refection, that colour isin the object. But now. I am ous of the way from :he outward Creation of Man, in whom there is a principle of more fine and reflexive reafon, which hangs on, though not in that manner, in the more perfect kinde of Brutes, as Tence alfo (loth to be curbed with too narrow compafs) layes hold upon fome kinde of plants, as in thofe fundry forts of Z00phyta, but in the relt thereare no further footteps difcovered of an animadverfire forme abiding in them; yet there be the
 or incorporated Art or feminal Reafon; I fay it is no uneven jot to pafs from the more faint and obfcure example of Spermatical life, to the more Confiderable effects of general Motion in Mineralls, Metalls, nor yet to fay any thing of the Medicines extracted, mortified, fixt, diffolv'd and incorporated with theit proper Veagles, becaufe we have intendedit ourlant bafinefs to return to Mineralls, Mettals, and fundry Meteors; whofe eafie and rude thapes have no need of any particular principle of life, or Speraatical form diftinct from the ref, or motion of the particles of the matter.

But there is that curiofity of form and beasty in the more noble kinde of plants, bearing fuch a futablenefs and harmony. with the more reined fence and fagacity of the foul of Min, that he cannotehoofe (his incellectual touch being fo fweetly. gratified by what it deprehends in fuch like objects, ) but acknowledge that fome bidden caufe much a-kin to his own nature that is intellectual, is the contriver and perfecter of thefe fo pleafant ipectacles in the world.

Nor isit at all to the purpofe to object chat this buinefs of

Beauty and comelinefs of proportion is but a conceit, becaufe fome men acknowledge no fuch thing, and all things are alike handforne co them, who yet notwithftanding have the ufe of their eyes as well as other folks; for I fay, this rather makes for what we aim at, that Palchrityde is conveyed indeed by the outward fences unto the foul, but a more intellectual faculty is that which relifhes it, as an Aftrologicall, or better, a Geometricall Scheam is let in by the eyes, but the Demoriftration is difcern'd by Reafon: And therefore it is more rational to affirm, that fome intellectual principle was the Author of this Pulcbritude of things, then that they fhould be thus fathion'd without the help of that principle: And to fay there is no fuch thing as Pulchritsde, and fome fay, there is no way to felicity; The firf, Ianfwer, is becaufe fome mens fouls are fo dall and ftupid. And the fecond is that they never knew The may to blifs, The firf cannot relifh all objects alike in that refpect; The fecond knows not Happinefs., nor the way to loxg life, nor the means to Health; nor how to return from Age to routh, ơe. which is as abfurd and groundlefs as to conclude there is no fuch thing as Reafon and Demonffration, becaufe a natural fool cannot reach unte it: But that there is fuch a thing as $T$ he way to Blifs, Lokg life, and a certain way to Health, not as yet known in England, 1 will demonftrate in a Treatife by it Celf, $T$ be may ${ }^{\prime}$ Health I hall thew you anon in this book, the reft in another Part, as I promifed yon:

Now that there is fuch a thing as Beauty, and that it is acknowledged by the whole generations of men, to be in Trees, fowers and frnits, and the adorring of buildings in all Ages, is an example, end underyable teftimony; for what is more and ordinary with the in then taking in fowers and freitage for the earnifhing of their work? Befides I appeal to any man that is not fank into fo forlorae a piech of Degeneracy ; that he is as fupid to thefe things as the bafeft of Beaits, whether for example, a rightly eut Tetraearum, eube or Isofacdrum, have no more pulchritude in them, then any rade brokenficuelying in the field or high-wayes; Or to name other folid Figures, which though they be noe reguler properly fo called, yet have a fetled Idea, ec Natare, sisa Come, Sphere, or Gglinder: Whether the fight of theie
do not gratifie the mindes of men more, and pretend to more elegancy of thape, then thofe rude cuttings or chippings of freefone that fall from the Mafons hands, and ferve for nothing but to fill up the middle of the wall, and fo to be hid from the eyes of Man for their ugliaefs: And it is obfervable, That if Nature thape any thing neer this Geonsetrical accaracy, that; we take notice of it with much content and pleafure, as if it be but exactly round, as there be abundance of fuch fones upon chefque; a hill in Arabia, I have feen them there, or ordinarily Qainquangular, or have the fides but parallels, though the Angles be unequal, as is feen in fome little fones, and in a kinde of Alablafter found here in England, and ocher pretty fones found upon Bulverton-bill neer Sidmouth in Devonfire; and neer Siratford upon Avos, and in Tyms Grove at Colton in Warwickeforire, are found fuch itones that grow naturally carved with various works, fome with Rofes, others with Lyons, Eagies, and all manner of delightfull works; Thefe fones I ray, gratifie our fight, as having a nearer cognation with the foul of man that is sational and intellectual, and therefore is well pleafed when it meets with any outward object that fits and agrees with thofe congenite Ideas her own nature is furnifhed with :- For Symmemetry, Equality, and Gorrefpondency of parts, is the difcernment of Reafon, not the object of Sence, as I have in another place proved.

Now :herefore it being evident, that there is fuch a thing as Beariy, Symmetry, and Comeline/s of proportion, (to fay nothing of the delightful mixeure of colours, and that this is the proper object of the Underftanding and Reafon; for thefe things be not taken notice of by the Beafts) I think I may fafely inferre; that whatfoever is the firf and principal caufe of changing the fuid and undeterminated Matter into thapes fo comely and fymmetrical, as we fee in flowers and trees, is an underfanding Principle, and knowes both the nature of man, and of thofe objects he offers to his fight in this outward and vifible world; and would have man fearch and finde out thofe fecréts by the which he might keep his body in health many hondreds of years, and at laft find the way so Blifs; for thefe things cannot come by chance, or by a Multira sious attempt of the parts of the matter
upon themfelves, for then it were likely that the fpecies of things though fome might hit right, yet mof would be maimed and ridiculous; but now there is not any ineptitude in any thing which is a lign that the fluidneffe of the matter is guided and determined by the overpowering counfel of an ecernall mind.
If it were not needleffe, I might infance in fundry kinds of fowers herbs and trees; but thefe objects being fo obvious, and every mans fancy being brauched with the remembrance of Rofes, Marigolds, Gelliflowers, Pionies, $T$ ulip's, Paufees, Primrofes, the leaves and clutters of the Vine \&cc. Of alt which you muft confefs that there is in them beauty and fymetry, and ufe in Phyfick, and gratefull proportion; I hold it: fuperfluity to weary you with any ionger induction, but fhall pals on to thofe confiderations behind, of their feed, fignaure and ufefullnefs, and thall pafs through them very briefly, and then I thall come to minerall Medicines, thefe obfervables being very neceffary firft to be known by way of an Introduction, and as ordinary and eafily Intelligible:

## CHAP.

## CHAP. VI.

## of the Secal's and Sigmaturas of Rlants, and wherefore GOD made them.

EVery plant hath its feed; Rofie Crucians therefore fay there are fecret Myfteries lye hidden inthem; which fhould be our delight to find out, for Divine Providence made all good for the ufe of man: ${ }^{\text {And }}$ ithis being no neceffary refult of the motion of the matter, as the whole contrivance of the plant indeed is not; and it being of great coniequence that they have Seed for the continuance of propagation of their whole Species, and. for the gratifying of mans Art alfo, induffry and neceflitie; (for much of Husbandry and Gardening lies in this, it canmos but be the Act of Comifil to furnith the feveral kinds of Plants with their Seeds, efpecially the Earth being of fuch a nature that though at firf for a while it might bring forth all manner of Plantts, (as fome will have it alfo to have broughe forth all kinds. of Animals ) yet at laft it would grow fo flugg!h, that without: the advantage of thofe finall compendious principles of generation, the Grain of Seed would yeild no fuch births, no more then a Pump grown dry will yeild any Water, unlefs you pour a little Water into it firt, and then for fo many Bafons full, you may fetch up as many Fankards fult.

Nor is it material to object that ftinking Weeds, and poyfonous Plaxts bear Seed too, as well as the moft pleafant .nd ufeful; for even thofe ftinking Weeds, and poyfonous Plants have their ufe in Rofec Crucian Pbyick, as you thall know hereafter; befides our common Phyfick-Mongers often ufe them as their Fancy guides them, grounded upon no other reafon then woful and deadly experience; fometimes the induftry of man is exercifed by them to weed them out where they are hurtful, which reafons if they feeme fleight, "tet us but comfider, that if humane induftry had nothing to conflict and fruggle with, the fire of mans fpirit would be half extinguilhed in the flefh, and then we fhall acknowledge that that which I have alledged is not fo contemptible nor invalid.

But fecondly; Who knows but it is fo with poyfonous Plaxts; as rulgarly is fancyed cencerning Toads, and other poyfonous

Serpents that lick the Venom from off the Earth? So poyronous Plants may well draw to them all the Maligne Juice and nourifhment, that the other may be more pure and defa. cate, as there are Recepticles in the body of man, and Emunctories to drain them of fupetfluous Choler and Melancholy, of c.

Laftly, It is very well known by them that know any thing in Nature and Phyfick, That thofe Herbs that the rude and ignorant would call Weeds, are the materials of very foveraign $M_{i}$ dicines, that Acenitam Hyemble, or Winter Wolfs bain, that otherwife is rank poyfon, is reported to prevailmightily againtt the biting of Vipers, Scorpions, and mad dogs, which Sir Chriftopher Heydos affenteth unto; and that that plant that bears death in the very Name of it, Solanum Lethifernm, prevents death by procuring fleep, if it be ayplyed in a Fever; nor are thofe things to be deemed uprofitable, lay the Rofie Cracians, whofe ufe our heavy ignorance will noclet us underftand; but they will teach us as followech.

We come now to the fignatures of plants, which indeed refpetts us more property and adxquately then the other, and is a Key (as Rofrectuciaris fay) to enter man intotle krowledge and ufe of the Treafures of nature, I demand therefore, whether itbe not a very eafie and Genuine inference from the obferving that feveral herbs are marked with fome mark or fign that intimates their vertue, what they are good for , and there being fuch a creature as man in the World that can read \& under Rand thefe fignsand characters, hencetocollect that the Author both of man and them, knew the nature of them both; and befides divine providence would onely initiate and enter mankind in the ufeful knowledge of her Treafures by the Seraphical illuminated Rofie Crucians, leaving the reft to employ the vulgar that they might not be idle; for the Theater of the World is an exercife of mans wit, and therefore aft things are in fome meafure obfere and intricate, that the fedulity of that divine rpark, the foul of man, may have matter of conqueft anderiumph, when he hath done bravely by a fuperadvenient affiftance of God.

But that there be fome plants that bear a very evident fignasuec of their nature and ufe, for example, Cipillus veneris, Polisricboy, or Maiden-hair; the Lye in which it is fodden or infus'd,
is good to wath the ferad, and make the bair grow in thofe places that are tare; the decoettion of $O$ ninces, which are downey and hairy Fruit, is accounted good for the fetching again hair that hath been fallen by the French $\mathrm{P} x \cdot$; the Leaf of Balm and AlLeluia, or Woodsisorrel, as alfo the roots of Sinthora, reprefent the heart in figure, and are Cordiackl.

Walnuts beare the whole fignature of the bead; the outward green Cortex anfwers to the Peicranium, and a Salt made of it is fingular good for Wound in that part, as the Kernel is good for the Brains, which it refembles.
Imbelicus Veneris is powerful to provoke luft, as Doctor Culpcpper affirms: as alfo your feveral forts of Satyrions, which have the evident refemblance of the genetal parts upon them; Aron efpecially, and all your Orchiffes, that they have given Names. unto, from fome beaft or other, as Cynoforchis, Orchis Miodes, Tragorchis, ©ंc. the laft whereof notoriorious for its Goatifh fmell, and Tufts rot unlike the Beard of that Lecherous Animal, is of all the reft the moft powerful incentive to luft.

The Leaves of Hypericin are very thick pricked, or pointed with litle holes, and it is a fingular good Wound-herb, as ufefulalfo for de-obftructing the peres of the body.

Scorpioides, Ecbiam, or Scorpicasgraff, is like the crooked Tayle of a Scorfict, and Ophiog loffum, or Adders T cngue, hath a very plain and perfect refemblance of the Tongue of a Serpent; as alfo Ophiofcorodos of the intire head and upper parts of the body; and theefe are all held very good againt poyfon, and the biting of Serpents; and generally all fuch plants as are fpeckled. with fpots like the Skins of Vipers, or other venemous creatures, are known to be good againft the ftings or bitings of them, and are powerful objects againft poy fon.
Thus did divine providence by natural Heroglyphices, read thort Lectures to the rude wit of valgar man; others of the $S$ rapbically illuminated Fraternith being entred, and fufficiently experienced of thefe, found out the reft, it being very reafonable that other herbs that had not fuch fignatures, might be very good for Medicinal ules, as well as they that had.

Rofec $\dot{C}_{\text {rucians }}$ have quickned and actuated their Phlegmatick natures to more frequent and effectual venery; for their long
lives, bealth, \& youthfulnefs, hews they were not very fiery, to fay nothing of their bappiseffe, riches, wïfdom and vertue, becaufe I have in my. Treatife of The nay soblife, fpoken of it largely.

## CHAP. VII.

 Of the ufofulnefle of Plants, and of the Works of God.YOn fhal now brieflytake notice of the ufefuines\&iprofitablenefs of plants both for Phyfick and Food, and then pafs on to the confideration of the infpired Rogie Crucians, what their Medicines are : As for the common ufes of plants, Herbals teach you fomething; but I refer you to the fingular Medicines of Rofie Crucians in my Book of The way to blijs for the Patacion of your health, A nimals know as much by inftinct and nâture; and that which is moft obfervable here, is this, That brute Beafts know as much as many Phyficians do that are taught by Herbals onely; and thefe deny the power of God in the Works of Na ture, and the power of Nature in the skill of man, that it Thould be impoffible to make Trees bear fruit in December; and Appletriés to grow to 6 loffom, and bear Apples contrary tokind in March.

Beafts have knowledge in the vertue of plants as well as men; for the Toad being overcharged with the poyfon of the Spider, ( 25 is well known ) hath recourfe to the Plantane-Leaf. The Weafel when the is to encounter the Serpent, arms her felf with eating of Rue. The Dog when he is fick at the fomack, knows bis cure, falls to his grafs, vomits, and is well. The Swallows make ufe of Celandine, the Lennet of Euphragia for the repairing of their fight. And the Afs when he is oppreffed with melancholy, eats of the Herb $A$ fplenium, or Miltwaft \& fo eafes himfelf of the fwelling of the fpleen. The Raven makes ufe of Cingrefoyle for the prolongation of his life to fomtimes fix or fevenhundred years; and therefore I think it is that the Rofie Crucians preferibe the oyle of Ravens, Spallows, and Harts for the ufe of man to annoint himfelf, to continue his flefh and well-complexioned body from wrinkles and lamenefs; and Dittamnam Cretenfo is much uf?d, as I told you in my Wife mans Croann; Cretien Dittainy cures Wounds of what nature foever.

Which thing I conceive no obfcure indigation of providence; for they doing that by inftinct and Nature, which men who have free Realon cannot but acknowledge to be very pertinent and fitting, nay fuch that the skilfulleft Phyfician will approve and allow; and thefe creatures having no fuch reafon and skill themfelves as to turn Phyficians, it mult needs be concluded by vertue of that principle that contrived them; and made then of that Nature they are, enabled them alfo to do thefe things.

Let us now confider the Fruits of the Trees, where I think it will appear very manifeftly, That there was one norker of Mira(les, andinpirer of Rofe Crucians; I might now reach out to Exortick Plants, fuch as the Cinamon-Trse, the Balfome-Tree, and the Tree that bears the Nutmeg, invelopped the Mace; as alfo the famous Indian Nut-Tree, which at once ( as the Rofie Crucians fay ) affords almoft all the neceffaries of life; for if they cut but the Iwigs at Evening, there is a plentiful and pleafant Juice comes out, which they receive into Bottles, and drinkinftead of Wine, and out of which chey extract fuch an Aquæe Vitæ as is very foveraign againft atl manner of fickneffes, the branches and boughs they make their Houfes of, and the body of the tree being very fpongy within, though hard without, they eafily contrive into the frame and ufe of their Canoes, or boat:the Kernel of the Nut ferves them for bread and meat, and the Shells for Cups to drink in, and indeed theylare not meer empty Cups, for there is found a delicious cooling milk in them; befides there is a kind of hemp that inclofes the Nut, of which they make Ropes and Cables, and of the finelt of it; Sayles for their hips; and the Leaves are fo hard and Tharp pointed, that they eafily make Needles or Bodkins of them for flitching their Sayles, and for other neceffary purpofes; and that Providence may thew her felf berigne as well as wife, this fo notable a Plant is not reftrain'd to one coaft of the World ast e Eaft-Indies, but is found in Affrica, Arabia, and in all the Iflands of rheWeftIndies, "as $\mathrm{Hi} /$ / tniola, Cuba, where our men are victorers; and feveral other places of the new-found World.

But I thought fit to infife upon thefe things by way of introduction, but to contain my felf within the compars of fuch
objects raterecefiary for car knowledge, and familiarly, and ordiaarily before oar eyes, that we may the better (thefe things underfood) Eakenccalion irom thence to demonfrate the Rofie Crucian way to health, and their ordinary Medicines which to us are not as yer known.

CHAP. IX.
The Rofie Crucian way how to get, bealth; The caufes why we eat food; Of the firft nat ure.of the World; $A$ meafure of raw and $t \in m-$ perate meat, and the canfe of the fiery, and foummy Gall and needlefs maddy bowels the melt; nature carelefs of making the resies of Urine drawer's, drimplefs animals bave noze at all; bow to clenfe four Self frow thefeidle Bowels and avoid all difeafes.

DO you not confiderthe weakneffe of man, what faculties he hath and in what order he is in refpect of the reft of the creatures; Rofe Crucians oblerve though his body be weake and difarmed, yet bis inward abiilties of reafon, and artificiall contrivance is admirable; he is much given to fearch out the Medicinall virtues of Plants, Wights, and Mineralls, and hath found out thofe that were of fo prefent and great confequence as to be Antidotes againft poyfon that woald $f_{0}$ quickly have difpatched mankind; it were good for us to demonftrate the Rofie Crucian Medicines, now our land is afficted with a fickne/s called the new difeafe, of mikichall fort $j$ dye, without remedy, for none as yet have prefcribed a Medicive, for young men that defire to live, and for old men that wifh for health, without which no life is fweet and favory, then let us bend our felves to cure our brethren firft, and endeavour to Thew the means (befides the commmon Collegian Dodors drenches, or Culpepers way, how every man may get and keep his health, that is fomething ftrange but a vowed truth; the confent \& equall(I mean agreeable to kind)temper\&dalling our four firft beginnings, the faff of our bodies, for if this knot be E 2
broken, \&theyloof towards their former liberty, theywax proud and itrong, and fight, for their nature is togecher by the ears, and pat us to pain, and lets the rule of nature, and this they call the difeafe.

Then to handle one at onee as our manner is, and will keep -ur cultom ftill, to keep onr health and body in temper, feems no fuch matter to me as che world would make it, even plainly impoffible, when I know all the wayes and entries to let in difeafes and diftempers of the body, may by fmall heed be foped and fenced.

Wee muft needs draw breath and eat meat; for the canfe I Thall ipeake of it in its place; and as this is not all clear and agrecable, fo nature hath her leavings; and again labour and rest are needful, and perhaps we cannot chufe but be moved in mind with joy, greife, fear, hope, and fuch like paffions, though the Stoickrdeny neceffity, faith Des Cartes.

By fo many wayes and gat-s difeafes may enter, if they be not well watced and looked unto, which may be done in reafon, and hath been done often, as they affure us that have lived long without all difeafe and fickneffes, as Iohn Harding relates of a Miniter called Iobs Macklaine to have continued for thefe fourfore years laft paft together in health, \&after his hair, teeth, ey $6 \&$ flefh renued, \& becameyong again, $\&$ fuch like fories are to be found enough if we might flay to feek them; fome are contented for all but air and meat, buc thefe fay they have often feeds of difeales lye hid in them unable to be forefeen or prevented, as we find thofe meats that make the fineft Thew, (as Wine and Sugar) and fuch enticeing baites, to have hid in them moft hateful difeafes and dregs in the bottom; fo the air when it feems the belt and highelt, yet is fometimes infected and poyfoned with venemous brearh fent out and thrult into it either from below or from the frars of Heaven, and as the caufe is hidden and unknown to us; fo the hurt imponfible to be avoyed and prevented.
If I lift to let my fpeech run at large, efpecialy in other mens grounds, I could finde that that Divifion is falle, firft, (to come to meat anon) and chen if it were
true, yet the caufe of that infection not unable to be forefeen and warded; but I am fo forry for the fault above, that I can the better take heed hereafter; yet methinks it is a grief to hear the harmlefs and glorious divine things above, fo defaced with flander, and no man makes anfwer for them.

Gentle Reader, be pleafed to ftay a little; If the Stars have no light, and fo no power but from the Sun, that moft wholfome and profperous creature, then they hart him moft wrongfully, and reprove themfelves very rightly. And again, if they be bue a piece of the finer part, and firft nature, as it were, of the World, as I have thewed in my Book of the The Wife Mans Crown, then they be the wholfomeit things in the World; fo far be they from poyfoned flander: And fo let their Lights be never fo grofly mingled in their meetings, and thereby that fate of the Weather changed fuddenly, and from thence our bodie's troabled and curned into Difeafes, becaufe they were not prepared and made ready for it, yet the thingsare good and profperous; and by knowledge of Aftrology, or infuences of the planets, and races of the ftars, we may prepare our felves, and prevent all, if we cannot have that happinefs to converfe with our Guardian Gensus. Now for lower reflexion, it is not worth the anfwering when there is fo much wafte ground in the World; then let us pafs over to that other Breach; may we not fhun the leaving baits in our Dyet, and take fuch meat as is moft temperate and uear our Nature, and then drefs the fame, after the moft kindly and wholfome manner, feafoning it wel with labour, mirth and fleep?

And to be plain, I have fhewed in another Treatife of mine, entituled, The way to $6 l i f f$, fo much noted by our Writers, what a jewel of health it were to ufe all raw \& temperate meat, or becauf we be wife \& vercuous, and thisDyee would perhaps change our Nature of fire, but like Pbiloophers, a quite contrary way; taking the belt, whenas none is loft, and leaving the worlt, which is that we now take, a Way I fay, to ftrip of all grofsnefs and foulnefs of bodies, the only hurt of themfelves, and is the Food of all Difeafes.

I will jell you another way which you will think frange, but you hall find it true; if the meat be temperate, as I bid you chafe
chufe ir, there is no hurt can come thereby, (if you keep meafure in your felves) fave from your leavings; thefe in fo clear a Dyet firft will be very few; but if you would be ruled by my Counfel which Nature faught me, thofe few fhould never hurt you.

Of all the Leavings in the body, there are three which the liver maketh moft troublefome unto us, (for the reft are eafily difpatched ) a light and eafie, or rather a fiery ( as fome call) Choller; a cold and heavy mud, called Melancholly; and the third is Trine, which I wil treat of in the next Chapter, but thofe two the worfer; and this fault is not in themfelves, but all by reafon of the needlefs and hurtful bowels in our bodies, (as the seedsman ufeth to fow good and bad together) which being of the fame kind and quality with thofe humors, do draw and pul them fil unto them (as all other parts and things do) for their Food and nourimment; and fo by the narrow paffages to and fro, their greedinefs in pulling and holding, and a hundred fuch means, fubject to great mifchances, have brought in as many mifchiefs, whereas Nature the great expeller of her unlike, and Enemies, if the had free choice and liberty, would otherwife with eafe, and without hurt, expel thofe Leavings, efpecially fo fmalla number of the better fort in fo clean a Dyet; nay, fet the malice of thofe parts, (thofe partsare Melt-Gall, and Reins) if there be not fufficient fore of other foul meat at hand, like $z$ poyfoned or a purging Medicine, they ufe to draw good Juices, and to make Food of them; what is not manifefted in this chapter, Shall methodically be demonftrated in the enfaing, fori intend to be ferious in this part of my Book, and will hhew you what Nature taught me.

CHAP-

## CHAP. X.

Rofie Cracian Medicimes made plain by cxampier, and thofe are above controlcnent; That thenet Sur-bcams declare fome fine cond forrain fatmefs to nour fiomarknt. How to live twonty yeers without $E_{\text {ood, }}$ as many creatiares do. Vfe and Cuftom a fecond Natari: The Bird called Manuda Diacu, and the finging Dog, and Camelian that never eat food. An experienced Medicine, ard how to apply it; Parcce'fr, and the Rofie Crncian sew Art of Healing.

0F Ariftotle is is reported, That he is the witty Spye of Nature, and as if he had been made in this matter, he fhews the need and ufe of the greater Encralls and Bowels of Wights, and faith very truly and wifely, The Heart and Liver as the fpring of Life and Food, to be needful for all $V$ Vights, adding to the hotter one, the Brain to cool, and the Lights to clenfe the Heat, flaying there as if he thought the other three unprofitable; nay for one of them in the fame Book, (I fay) telling the fories of theHart and Camel, and giving the reafon why they be both fo fwift, healthful, long-liv'd and other good properties above the reft enfeoffed, vouched in plain tearms, the want of the fiery and fcummy Gall, as a great Enemy to them, for the Melt that muddy Bowel, that it may be left out as needlefs in the bodies of the better creatures. The Meadows near Cortine and Muggadore declare when by a flrange and hidden vertue they bereave the Beafts thereof that graze upon them of it; the Herb is called Afplenium; as I told youin the preceding Chapters, nay, that the Mift is not onely idle, but hurtful, which all experience, even in our felves hath taught it.

The $T_{\text {urks }}$ light Footmen, (I fay, which I know not by what example unlefs it were the want of the fame in the Camel, making the Beaftable to travel an handred miles a day, and fo without drink fifteen dayes together) being in their childhood purged of their Milt, prove thereby the moft light, fwift, found and lafing Foormen in the World.

Asfor the veins of Urine-drawers, as drinklefs creatures have none at all, fo fome men have but one of them, as if nature paffed not to make any at all; if we could forbear our drink (as thele Beafts do by kinde, and fome men by cuftom ) we might the better fpare them, and avoid many mifchiefs in our bodies.

Therefore the odd man, Paracelfus, I know not by what light, if not of the Rofie Grofs, (caft in I think from Seraphical illumination) not onely fees thefe faults, but alfo finds wayes to amend them, and to cut she mifchiefs off all there three noyfome parts, not with any yeilding Craft, but with Rofie Crucian divine kind of Healing, with Aurum protabile, © c. fo that to avoid all difeafes that fpring of the Leavings, take of Aurum potabile, one ounce; one pound of the Oyle of Ravens; two pound of Miltwajt , or Alplenium; a handful of Cinkefoyle, of Dictamnum Cretenfe, Ophioglofsum and Scorpioides, Echium, of each a like quantity and oblerve the Afcendent, and his Lord; and the Moon, and Lord of the fixt, at your difcretion, and take the quantity of a Walnut every night and morning, and anoynt the face $\$$ hands, $\&$ (if you wil) the reft of the body: Rofie Crucians have other healing and yeilding Medicines, you Thall know them in their places; this is fuch an experienced Medicine, that you know where to find it; I need not fhew you to put out the fway and power of thefe idle bowels; or perhaps it thould not need, and in a frock that eafeth our clean Dyet Nature her felf as fhe doth in thofe Meadows by other creatures, would alfo quite raze and difpatch them uithin a few generations.

But I will go farther, Hear a Rofie Crucian new and unheard of opinion; and yet let not your judgement run, before you fee good reafon; what if we could faft for ever, and live without all food? might not all hurt and danger of meat be then foreftalled? if other Creatures, whore life hangeth upon the fame hold, by the fufferance, nay by the commandement of God and Nature; do laft for ever, there is no Reafon but the fame common Nature will ar laft fuffer it in us; Let us fee. And to ftep over the Camelion, becaule it is a Cold and bloodlefs Creature; what fay we to a Bird, which is an hot and perfect one?abird in the Molucco I/lands, Manuda Diaca by name, that hath no feet at all, no more then an ordinary fifh, as Mr. Moore faich, and I have feen her; the bignefs of her body and bill, as likewife the form of them, is much what of a Swallows, but the fpreading out of het wings and Tall has no lefs compars then, an Eagles; fhe lives and breeds in the Aire, bornup by the force of wind with more eafe then Archytas his Dove, and comes not nearthe earth but for her Burial; for the largenefs and lightness of her wings and cail fuftainher withour Laffitude, and the laying of her Egges and brooding of her yourg is upon the back of the Male, which is made hollow, as alfo the breaft of the Female, for the more eafie incubation, taking no other food, as alas how thould fie? then there is found: but whether fhe lives meerly of the dew of Heaven, or of flies and fuch Tike infects, I leaye to others tódifpute.

Nay, tiave you rot heard of the Little Dog in the Weft. Indies, which fingeth to fiveetly all the night long, neither nighe nor day eating anything ? But there be examples in our kind as well, their it is certain above coutrolment: Sir Cbrifopher. Heydon faith there is a Mouthlefs and fo a meatless people or kind of men abour the head of Ganges, which liveth by the breath of their Noftrits, except when they take a far journey, they mend their Diet with the fmell of flowers: and left you may think I lean upon bare Authorities withour the ftay of rearon, all' the matter reftsupon this reafon'I rold you before, that pur life lay in the hand (befide a little exercife) of tivo like ments; one for the Soul and Natural Heat which is within us, and the fineft and firft moilture in our body, the orher is withour any meat; of the fame Temper with our body as near as may be, to uphold the frame and building of

And we are now grown fo out of order, and fo much eltranged from our Etherial firlt Moifture and the life of God, that we creep. downward towards the Earth through difeafes, before we canreach the Life of the Vehicle; within fixicore years we dye, and are hidden from the femble approch of renewing life.

## CHAP. XI.

Of Nature and her medicines experienced by Rofie Crucians, and of the oocult virtue of Mifteries;of the healing and confuming medicines and of their ufe; of the Gout, Leprofie, Dropfie and Falling Sicknefs, ©゙c.

N
TOW the Aire it felf, efpecially when it is ever more as the wet Sumbeams declare, fo fprinkled with fome Fine forraignfatnefs, may feem fufficient food to nourifh the finer part of our Frame, wherein the temper of mankind, and his life (touching that point) fandeth, which is as much as any meat can doto life, (for it is not fed by common food, as I faid above) though not enough for frength, becaufe the groffer, founder, and tougher parts wherein the ftength lyeth, thall want food in this Dyet, and fail no doubt greatly, yet life fhall laft ftill, as long as Aire and firft moifture holds, in my opinion: or if we think that fo fpare a. Diet, we may mend it (as the momthlefs people do) with fmell of Elowers: or rather, as we know Nature is able to draw Aire and orher food which fie defirech through the skin into all places of the body; fo if the had meat applyed tothe fomach, fhe would no doubt fatisfie herfelf that way moft finely, without the heap of hurts let in at the broad and commongates, as we fee by example for Drink, that all the while we fit in Water we fhall never thirf: And for meat, I have heard Rofic Crucians fay, by applying of wine in this fort they fafted without all hunger for two years together.

And in !ike manner I have experienced this, and fafted two dayes when I firft fudied the nature of the Guardian Genii: Bue if that would not ferve the turn, and we mult needs receive in
meat at the common gate, yet we may let it pals no further then the gate, and make the fomach in the mouth, which is the ufe of fome Rofie Crucians when they are Seraphically illuminated; and co provide enough for life and ftrength, and a great deal berter for our health, then we do, becaufe the clearer part alone Thould be received, And moreover I fay, for the clear difpatch of that our ordinary trouble and anoyance which your reverence will not fuffer me to name, alchough Imight among Phyficiams, but they know my meaning: But ir Chall not need to theal Chifts and holds if you will believe the Rofie Crucians, that we may eafily falt all our life (though it be three hundred years together) withour all kind of mear, and fo cut off all doubrs and dangers of direares thereoffpringing; and for my own part, I know fome that have fafted and lived in the holy orders of the Fraternity without all food ten years space together. What need we fay more? if you be borh fohard of belief, and dull of light, and reports of good Authors, nor my own experience will fink into you, nor yet can you fee the light of reafon fhising before yo', take here a few of ordinary matters in the life and ufe of men, and weigh one with another; is it not as common in ufe, and indeed needful, to fipit, and avoid another namelefs leaving? and to Drink, but to nleep efpecially? If fome of thefe, nay all nay be fpared, why nor our meat alfollet us fee a little, and by example, becaufe Reafon is borh too long and too open to cavil.

Toleave drink; which many have all their lives left; Elizabeth Drewe, a Devonfhire Gentlewoman, is reported never to bave $\int$ pat, nor the whole Indian Nation. Sr. Ioba He ydon faith, he knew one that kept the namelefs matter forty daies together. And although this anfivereth not the queftion, yet it fheweth the truth of the former IToly Story, for if in fo foul and grof's a thing as dyet is, he could fo long want it, why not thefe men for ever, in fo clear and fine adier, almoft empty and void of all leavings? For the groffer fort, which make up this foul and fhameful one we left before, as you heard, and the finer in the paffage from the Stomach, through the former Gates were drawn all away to the Liver, as the like is ever in us and voided otherwies. To clofe upall, I was at Sea with one that flept not one wink for there three years lait paft, and Mr. Iohn Knot ford is a Witnefs to this truth, and Capt. windfor.

And thus we fee thefe Itrange things. fall out in proof, but how I cannot ftand to theiv: Firft nature fuffers them, then ufeand cufoome another Natures brings themin, yet, we may well beleeve the like in this matrer of mear we have in hand; For as the Bear (according to the guife of many Beafts that lurk in Winter) fafteth fourty daies, fo Eugenius TheodidaCtus, the reported RofieCrucian rells of a Scottip young man, David Zeamons, that waired on him, that by ure brought himfelf tofaft three daies together, which by ufe mighe have been three hundred as well, if he had ordered himfelf thereafter by how and creeping curtome, as Captain Copeland calls it, and by fuch means as I fet down be\{ore.

So we fee, I fay, great wordly wonders prove plain and eafie truths in the fight of Widdome : you have read of the wonderful works of God in the Accurate Structure of mays Body, of his Soul, of his Senfes, of Plants, of Minerals; and Rofie Crucian medicine fhall be that which I will infift upon, and that by the means aforefaid (where are more than one, if this like them not, they may take another) it is pofffble forall men by kind and cuftome to keep their health for ever : Let us come to the next point, that is, afwell to be recovered if it were loft, and that all difeares may be cured. This is a point much harder then the firft, even fo befet and fopt with all kind of lets and incumbrances, that a man can fcarce tell which way to fet his toot forwards. Firt appears effculapius, Hippocrates, and Plato, the chief among the Grecians, bearing in hand fundry difeafes of both kinds (both come by defcent, and gorten by purchafe) hopelefs and patt recovery, and giving over the men that owe them, for troublefome to themfelves and to the Commonwealth: Then you may fee Galen, and his foft and fine Company with him, and that follow there are Gerard and Riverius, and Culpepper, and thefe with a long train of hedge-Doctours; and among thefe ftands Freersian, with Caterers, and Cooks, ladenafter them with all kind of daini) Druggs, ttand forth and $C_{r y}$, they have thefe many ages devoured heaps of Books, and rook endlefs pains in fearching our the Nature of fingle Medicines, and making mixtures of the fame, and yet could hardly cure fome Agues, and other lefs difeafes; But for the four great difeales, viz, the Gout, Liprofie, Dropfie;

Falling Sicknefs, they could neverheal them, and have therefore for Oracles fer them down incurable.

## CHAP. XII.

That the knowledge and vertse of Medicines are fecret ly hid from vulgar underftanding : bow they may be gotten: and of what lies conched in the Oil of Bodies: of the ufe, and how to fetch it out by Skill, the Haven of Medicine.

vVHat is left to be done in this Matter? what hall twe fet againtt the weight of fo many great mens Authorities? Equally put them in the Ballance, as we have done hitherto, and weigh them with truth and reafon. But where fhall we find it? fay they; As it is every where, as Mr. Hobbs faid, drowned in the deep, fo in this matter it is fcattered all abour, and largely fpread withall; for there be three things, and every one full of under-Branches, belonging to the Rofe Crucian Art and way of Healing; The firt is knowledge of the Difeajes, the fecond the remedies againft them, and the third of the Appliance of the remsedies, all which fhould be traverfed in this Methodical myflerious Treatife : but it hall not need I hope, nay we muft take heed how we enter into folong and large a race, in fo fhort and narrow a compafs of time appointed, efpecially being never run before by any man but our felf, not one of the wife Egyptians, nor, our Anceftours, the holy Company of Mofes and Elias, whofe fteps we flive to follow; and their fucceffours; for when they have once hit the mark they have fhot at, and gotten the great and general Medicine Caput mortuum A. P., curing with eafe all difeafes, they think it Atraightenough, and anempty and needlers. Labour, as it is indeed, to trouble themfelves and their Children with large Rules abour innumerable Signs and Caufes of infinite difeafes, and abont other fmall particulars in appliance. Neither would I have you fer Sendivogius, Paracelfe, and their heirs upon me, and fay they have taken great and goodly pains inthis field; you will then forceme to \{pear my thoughts

Though thefe men,( to let Philalethes, Vaughan, and Culpepper, Varlet, Freeman, and other Pretenders, with Jome Schollars goe, as too young and childifh yet,) by grear light of Wit wherewith chey flowed, and by long proling both with eies, ears, and hands, in the mylteries of Egypt, faw and performed many of the Rofic Crucian deep fecrets, yea and there got moft of their worldly praife, although I think a number feigned, yet Paracelfe his new Art and Rules of Healing are not good in my opinion; For firf, againg the example of the Rofie crucians, from whom he had received all things, and then in defpight and difgrace of Galen, for mifcalling his Countrymen, as you have heard, but chiefly carryed away with a mad and raging defire of Fame and Honorr, which Culpepper alwaies defpired, yet the Starres favoured him, when I affifted to fer up that new,famous and ftrange work of Phyick, now well known and practired, which Paracelfe when he took in hand, a man unfit to doit, co pull down and raze the old Work, and tofer up ournew experienced fecret, which he could never do all his life.

Thenwe fee how it is performed, he fets down fome falie rules, fome waft, idle, and fonie wanting, and all unconftant, difordered, and unlearned; when he doth well (as he doth fometinue) he doth no more then was done before him, and brings in the fame thing difguifed with new, odd, crofs, and unheard of names, fich as may move wonder at the firft, but when they be fcanned, Lavghter, as Mr. Moor faith of Eugenius Philalethes his like devifes in his Aula Lucis Adamica Magica or Euphrates, and others of his Welch l'hilofophie. And that I doe not flanderi them where there is no caufe, I could prove, if chis place would admit a Volume. Wherefore let us follow the true and right Rofie Crucians, as eafly you may know them by their actions, if ever you fortune to fee them and be acquainted with them ; and leave Paracelfe, and the reft in this ill matrer, and Light and Apifh, as he makes it; and why hould we fpend all our care and thought about a fmall mater ? you have a good Medicine and remedy again!t difeafes, when old wives in the Countrey, and fome good Women, amongt other Dr. Culpeppers late wife, and Simple men, onour fidë ( I mean Simple in refpect of the Grecian fubtilties about nothing ) when thefe people have healed mol, nay,
even all difeafes, and with which womanifh Medicines indeed; the German Doctour (let us give himhis due praife) hath quite @ain the Grecian Phy (ick; and here done much for mankind, by defcribing and dipatching our clofe and fecret enemie, which under colour of friendihip and fighting againft our enemies hath this long time betrayed us and done us much mifchief; which thing one of their beft Captains of their State, Fernell by name, after he hadbeen a while in Egypt, began to fmell at laft, and began to repent himfelf of all his former pains (which we know were great) beftowed in that kind of Healing, faying it to be but words, and the whole force and weight of this $A_{r t}$ to lean upon the knowledge, and vertues of Medicines, feeretly bid and couched in the midft ard oyl of bodies, to be ferched out and gorren by the skilful means of Alchymift ; even fo of that Art, which is fo much condemned of his fellows before and fince him, have fied and do daily flie from the daily toil and trouble of their fruitlefs and barren dead Sea: Now let us fhift our Sailes, and flie furcher too, I hope of wind and tide and all; which we have. ah rill

But let us mount up to the main-maft top of our Knowledge, and fee if we can defcribe the Haven of Rofie Criscian-Medicines, and fee what marks it hath, and how it differs from orher Creeks adjoining, left at our journeys end we mifs, with more fhame and grief, and fuffer fhipwrack. A medicine is that which kills the face of that which hurrs us; and this it doth many waies, and yet alfo to one end (which is is the end of all doing and working as I faid before) for his food and fuftenance.

## CHAP. XIII.

Medicimes againgt Witch craft, and to cure thofe that are afficted, thereb), although their bodies be poffeffed with evill fipirits, thats caufe them to vomit up. Needles, Thimbles, Pots, Glaffes, Hair,, and J Jreds of cloth, which bg the Divil were conveyed into the boa dy. That Winds and Tempeffs are raifed hy Witches upon meer ceremonies of Medicicess, and of poy $y$ ons sp with the examples alfo. of other Jupernatural offotis of unclean. Spirits, and of imagination. How to cure a Witch, axd to take away, ber power.

AServant of God and Secretaxy of Nature, mult be well advifed of what he writes, efpecially in chis age; and of this matter, (viz.)of the Rofie Crucian Phy fick, left he hould, as I'aid before, fail in this defign, and fo is may be a thame that he fhould be reproved, by the pretenders to thofe wife truths he alone hath opened to publick view; then let us come again and fort our fpeeches.
$A$ Medicine beals us, and kills our enemie, either by dulling or confuming it;for when it meets with a contrary of even frength (as when oyl and poyfon 8 Ec . joyn) then in Atrength they neither. eat up nor deftroy one another, but both. are dulled and weakned, and make one heavy thing which nature cafterh out for an unilike and unkindly dead thing, which they call ad excrement, or (Leaving;) but in care it be of more ifrength and power then our enemie, then it quite deftroyes, devours, and turns himinto his own nature. And this confumer is either like the thing that hurts us, in which fort even as every herb of fundry qualities draws and feeds upon his own juice in a Garden; fo one Poyfon dorh cure another, and all purging and drawing things co heal us, and all Rofe Crucians hid and Divine properties do work by plain reafon; or elfe it is unlike and contrary to their cuftome; after which manner as dry ficks, and Tow, and vinegar quench wild fire, or other Fat Fires, before water, whofe fatnés feeds it, for the frong contrary quality quelling and eating, up the weaker; fo doth any cold and dry thing as Bolearminick, Terra Lemnia, \&c. cure a Rotten poyfon: and fo are a greatnumber of cures done; which onely
onely courre, in a word, the Rofie Crucians ufe for Phyfick, and not indeed without good fuccers; we heard even now of two hinderances of healing, which our common Phyficians did take unawares, and Paracelfe pretends to have found out before me, gave any hint to the World of our experienced inventions, of Gold diffolved and made potable, being incorporated with its proper Veyle, which we now ufe by the name of Aurum potabile; but Paracelfe ftraieth much in the making of it, and knows it not no more than that tattered Dottor Freeman, fo ीnamefully called amongft Phyficians: Whither in their poifons, on the other fide, when they think all cures thereby performed.

Now when the Confuming Medicines have done their duties, Nature expelts them for poifon and unlike frange things, according to the Rofie Cruciax Axiomata, as well as the Grecian Rules, becaufe all their Mediciñes were not approved by the Fraternity, and ivere by their confeffion fich ःBut if they had either thought of the dulling nourifier, which as I told you, rakes the nature of the leaving or excremeint, or had known the Rofie Crucian wholfome Medicine, they would have made another reckoning; But let them go, and us fee out in time towafds the Haver of Health, If the Art of Healing be nothing bite deftroying hurtful things, And their ftronger enemies (bur equality will fometimes ferve the turn ) or likes together; and the world be full of both thefe kinds of Creatures, following the nature of their Parents of four beginnings, which are as we fee, fome like, and fome contrary one to another.

Then furethe Rofie Crucian Art of Healing is not (as fome may fay) impofible, truly it wanterh nothing, but a man well skilled in the Nature of things, $A$ fervant of God, and Secreta$r y$ of Nature by name; for (I think) I neednot pur in a Phyfcian, to know what other pate the Canfes of the difeales, which mult be knownand matched; becaule as Sr. Chriftopher Heydon the Seraphically Illuminated Rofie Crucian, and learned Aftrologer, well faith, He that knoweth the changes and chances of things in the great World, may foon find them in the Little.

Bur our nought-Healing Bill-men, that daub Medicines upon every Wall and Poft, and fome Leaches, will Itep in, and fay, difeafes are in fome fo great, and in all fo many, and mans wit is
fo weak and Challow, and the Medicines fo hid and drowned in the deep of Nature, that it is not poffible to find them all; or if they were fo:nd, to apply them withfurh difcretion as Nature mighr abide thofe poitoned Fraies and Bartels wirhin her. And again, admit all this untrue, yer there be fome difeafes fent form Witchcraft and Sorcery, and other means which have their caufe, and fo their Cure. I have read of fom that have vomited uppieces of Cloth with Pins ftuck in them, Nails, Needle e, \&e fuch like fult and this is ingeffedinto the Stomach, by thepreftigious Sleights of witches; Others I have feen vomit up Hair, Glafs, Iron, and pieces of Wood with Pins fuck in it; anothers Corps was diffected, and ripping up the Ventricle, there they found the Caure of the difeafe, which was a round piece of Wood four Knives, fome even and fharp, otherswere indented like a Saw. Others do Miracles by calting Flint-ftones behind their Backs towards the Weft, or Atriking a River with Broom, or flinging of Sand is the Air, the firring of Urine in a hole in the groynd, or boyling of Hogges briftles in a pot; fome by whifpering fome words ix the Ear of an horfe or wild Stagg, could diret bim a journey acc,ording to their own defire. But what are thefe things available? to gather Clouds, and to cover the Air with darknefs, and then to make rhe ground fmoke with peals of Hail and Rain, and make the Air tertible with frequent Lightning and ratling Claps of Thunder: Bre this is from the power of the Divel (as fome fancy) which he hath in his Kingdome of the Air.

For the Remedy of thefe mifchiefs, thave feen a man was perent, when ome have vomited up Needles, Thimbles, Shreds of Cloth, pieces of Pots, Glafs, Hair; another would fuffer himfelf for money to be run thorow with a fivord when I was not there, but it appeared to me a Fable. I have feen a Rofie Crucian PbyEcian cure the fe aflited People. But if you will fay, There is a touchfone whereby we may diicerne the trath of Metals, but that there is nothing whereby we may difcover the truth of Miracles teen: ded every where in Hitory. But I anfwer thereis, and that is this:

Firf, If what is recorded was avonched by fuch perfons, who had $n$ n end nor inereft in avouching fuch things.

Secondly, it there ivaie muy eye-witneffes of the fame matter.

Thirdly and lally, If there things which are fo frange and miraculous leave any fenible effects behind them; Though I will not acknowledge that all thofe Stories are falle that want thefe Conditions, yet I dare affirme that it is meer Humour and Suilennefs in a man to reject the Truth, of thofe that hear them:For it is to believe nothing but what he feeth himfelf, from whence it will follow, That he is to read nothing of Hiftory, for there is neither Pleafure nor any wefthefle, if it deferve no Belief.

Another Remedy for thefe Supernatural difeafes, is, Let one wath the party Sufpeited, when rhey go homero their bouse, and prefently after, before any body goe into the houfe after hims or her, lec one pull a handful of the Thatch, or a Tyle rhat is over the Door, and if is be a Tyle, trake a good Fire, and heat it red hot therein, fetting a Trivet over it; then take the parties Water, if it be a Man, Woman, or Child, and poure it ipon the red hot Tyle, upon one fide firf, and thenonthe orher; and again put the Tyle into the Fire, and make is extsemety hot, turning it ever andanon, and let no body come ino the hor fe in the mean rime.'

If they be Cattle that are bewitched, rake fome of the Hair of every one of them, and mix the Hair in fair water, or wer ic well, and thenlay it under the Tyle, the Trevet ftanding over the Tyle, make a lufty fire, tur ne your Tyle oft I pon the rair, and fir up the Hair evet and anon; after you have done this by the space of a quarter of an bour; lec the fire alone, and when the Afhes are cold,bury them in the ground rowads that grarter of Heaven where the fufpeeted Witch lives; this Mr. Lilly faith he hath experienced.

If the Witch live where there is no Tyle, but Thath, then rake a great handfulthereof, and wet it in the parties when or elfe in commonwater mixed with fome Salt, then lay it in the Fire, fo that is may molter and fmother by degrees, and in a long time: fetring a Trivet over it. Or elfe take two new Horfe-fhooes, heat them red hot, and nail one of them on the Threfinold of the Door, bur quench the other in the Urine of the party fo bemitched, then fet the Urine nver the fire, and put the Hor fe-fhooe in it, fetting a Tryvet over the Pipkin or Pan wherein the Urine is; make
the urine boil with a little falt put into it, and the Horfe nailes, until its almolt confumed, viz. the Urine; what is not boiled fully away pour into the fire : Keep your Horf-flooe and Nails in a clean Cloth or Paper, and do likewife three feveral times; the operation will be tar more effectual if you do there things at the very change or full Mcon, on at the very hour of the firft or fecond Quarter.

If they be Cattel, you mult mix the hair of their Tails with the Thatch, and moilten them being well bound together, and fo let them be a long time in the fire confuming.

You have heard the Caure of fome of there difeafes, and have heard the Cure by Sympathie alfo; but thefe are without the compars of Nature, and fo let them pais with our fickle ftanding, which is daily and hourely fo befet with deflinies, that a man can warrant nothing.

Truly deftinies aré fo deep and bottomlefs, (to return ftraight Homer-like upon them, and therefore it were beft indeed to let themgoe, and the applying of the Medicines with them) The rather becaufe the other, (I mean the former) is fo light a matter so a difcreet Phyfician, fuch a one as is poinred ove by their old and famous Leader Hippocrates, who bort in this and all other duries of $h$ is Art made fuch fpeed, and fo far paffed all his fellowes (as none fince, which is a good time, could ever overtake him) no nor yet come f n neer as to keep the fight of him, whom they had in chafe and followed.

Then for thofe Supervatural caufes, which I fhall not Itand here to fearch (for fothey are called) if they flow from unclean and micked Spirits (as fome think) they are not the Stuff of the things that hurt us, though fomtimes they divell in and poffers the bodt, but windy matters, muchlike unto thofe fierce and fidden changes of the Weather, proceeding from the Influences of the Planets and fixed Stars, and working the like effects in mens bodies, fo that fith the neareft caufe is Natural, let the relt be what they will, and the Cure be done byNatural means, as we fee by experience amonght is: And therefore $E$. $A$. thar pretends this, and puts the fault in the Faith of the wicked, which is a thing as far above Nat:ire, yer holds its Cure with a Natmral Medicine, which we call a Quintefence.

Alchough I am not willing, that fometimes this ficknefs is fuch as he bids us fometimes withltand it with another as Itrong a belief fet againt it, but for my part, I cannot reach it with my conceit (let deeper heads then mine or the Vice-Chancellor of Oxford, Doitor Owen, think upon it) how there beliefs and imaginations, and orher parts and powers of the foul or mind of man, can fo flye ont of their own kingdome, and Reigne over a forraigu body, when we know the Soul and minde is fo faft bound in the bo$d y$ indurance, and fo like ro be, untill it be the great pleafure of the Omnipotent and the Omniffent God, the chief good, who hath or committed them, to let them loofe at once, and fer them full at Liberty; and this may be difputed with Grace and knowledge on my part; Let'this man therefore buzze againtt my knowledge, which he would have to be more then Grace, I appeal to the Naturall faculties of any free judge, whether there be not as much Grace in me as there is honefty in him: All men cenfure as they like of Stories; fo let thempais amongft old wives tales for me, we will feverely follow our task. That if the effeen do not ceafe which the object hath wrought upon the Brain, fo foon as ever by turning afide of the Organs the object ceafeth to work (viz.) though the fence be paft; As the Atroke of a ftone, a blaft of wind, puts Atanding water into Motion, and it doth not prefently give over moving as foon as the wind ceafeth, or the Stone fetleth: fo the Image or Conception remaineth, but more obfcure, while we are awake, becaufe fome object or other continually plyeth and folliciteth our eyes and ears, keeperh the mind in a ftronger Motion, whereby the weaker doth not eafily appear. And this obfoure conception is that we call Phantafie, or Imagination; Imagination being (to define it) conception remaining, and by little and little decaying from and after the act of fenfe, çoc $c$. If fome of there difeafes fpring, as Mr . Moore, Doctor Culpeter, and fome orthers hold, and with good reafon, from neither of both thefe two roots named, but from a fonl and venomous breath, fent forth from a poyfoned temper of the witches body, through the windinefs of batefull eyes: For Thought fafbioneth the blood and Spirits almoft at hio pleafure; then all the caufes being ordinary, and agreeing to the courfe of Nature, they may be cured and put to flight by the fame courfe and means; which opinion. if you pleafe to bear with
with my arrying, it is worth the handling, taketh hold upon this reafon, becaufe (as Rofe Crucians do wimes) fome bealts of ranker venome, do witch and hurt after the fame manner; as an old Toad by fedfaft view, not onely peevails, but benums a weafell, but kills a young child. And by the fame means the Eever hunts the little fifh, and takes his prey: But moft fiercely and mifchieoufly of all creatures in the world, the two monfters in kind, the Cockatrice and Apoblepas: again, for that the eye of a menftruous woman (as all report) doth fpot the glars which it beholdeth; and moreover Eugenius Theodidactus, in the wifemans Crom, telleth of many folk that through a poyfoned prerogative, which a monftrous Mark of a double-fighted eye gave unto them, were able to bewitch todeath all thofe upon whom that eye was angerly. and furely fet and faftned; but chiefly becavfe we fee them that ufe this wicked trade, to be by kind of a muddy and Earthlike complexion and nature, brought by age, as they be moft commonly, long life, and grofs diet, to the pitch of meiancholy, that is, to a cold and molt dry narure in the world.

For certain proof whereof, bring one of them ont of that beaf:like life, brought unto merry company, and fed full wish daincy Diet, and within twenty days; as hath by a Rofre Crucian been tried a truth, the whole flate and nature of her body will be fo changed, foof as as it thall not fuffer her to bewitch and hure again;as youmay read in my'Familiar Spirit or Guardian Genius.

CHAP.

## CHAP. XIV.

The Naturall effects's of Medicine: the force and power of mineralls. in difeafes; with examples alfo that every difeafe-breeder hath the cure or remedy in it: examples that poyfon prepared cures poyfoned people: Rofie Crucian Arts: the virtue and power of the Planets and heavenly Stars poxred through the influence of the moon upon the Lower Creatures: of. Ifot Stomachs: of the Etherial frff moijture of of man: examples alfo of Rofie Crucian Natural and /upernaturall cures: of the unde:-fanding of thefe experienced truths by the mit of man: of Paracelfus and Culpeper..

LEt us come to the next and chiefelt point; And there we muft not fay for iname, that there helps and remedies lye hid in nature, too far for the wit of man to find, unlefs we will accufe. our own nloth and dnlnefs: For nature hath brought them forth. and laid them open aiwel as the Poyfons and hurtful things, or elfe fhe were very crofs and ill-willing to him for whofe take it feems the doth all things.

Nay further (as Mr. Hobs faith) her good will is fuch, as fhe hath not only laid them open, but given us wayes to come by them, and means of fpeech, hands and wit alfo, far above allother living creatures. And yet the hath not left us fo, but left by. chance we might go wide and mifs them, to thew her morherly love and affection towards us, She hath guided (as Mr. Moor faith) many witlefs Beafts, even by common fenfe, nnto their fpeedy helps and remdies in their difeafes: That we by the plainnefs and hame of the example (as Mr.Gadbury wifely faith) might be tanght and-moved to feek out the myfterious truths of nature in Celeftial bodies, as wel as beafts that reek and find us Medicines helpful inthe likedifeafes, for our Terreftial Tabernacle. As to name a few not unworthy meaning ; the maketh the beattiippotamus intime of his fulnefs and fatnefs to go to a reed, and by rubbing a vain to let himielf blood, and to fopit again by laying mud upon ir ; A fick dog to feek an Herb aud purge himfelf; and the bear to do the fame aiter his long faft in winter; fhe leads the Panther, when he is poyroned, to her fon and nameleis
leaving,
leaving; a nd the Tortoy $\int e$, after he hath eat a Viper, to Summer Savery: And the Hedg-hog is fogood a natural Altronomer, that he fortifies his hole againit foul weather; the Hog will gather Mofs and ftraw to cover himfelf a little before it rains; The dog knows the influence of Mars whenhe doth fleep by the fire, and will not go out a dores when he is in any evil pofition : and nany fuch like examples hath nature laid before us for our infruction; by which at laft wife Plato, Philo, Apollonius, $P$ ythagoras, and painful men of Greece, as they themfelvesreport, be they Elias or Elifha, from whom the order of the Rofie Crofscame, (as fome fay) or elfe as others will have it, from Mofes, or Ezekiel, or wholoever, and by laying reaion and further proof rogether; firft made the Art and rules of Healing; to know whence difeafes. came, and how to recover them. And then feeking all about for remedies to ferve each turne, by little and little they matched the moft patt of the leffer rank with fingle Medicines, and the greater ones they doubled and coupled many together, infomuch as at laft, which was in Hippocrates time, they were able to heal all (faving four,) of the greateft and deepeft difeafes, the Gout, the Dropfie, the Leprofie, the Fallingficknefs; which ate now healed by the Rofie Crucians onely. But this race is below the Seraphically illuminated Fraternity: now not a Phyfician that is lined wirh Plufh in England, Spain, Germai:y, or France; but holds that Long-life, Health, Yourh, not attainable, they therefore with one conlent, amonglt the other four, call them imporf:ble.

But to come to the point; what wrong this was both to skill and nature, they do eafily fee and laugh at, which know that in this labour, they did not onely overfee and skip the Minerals, the ftoutelt helps in the whole flore-houre of Nature (although they could digthem our well enough to other and worfer ufes) bur alfo, which is in all, did let the Rofie Crucian skill of preparing Medicines, whereby weak things are made almighty, yuite efcapethem.

Wherefore to make up the Rofie Crucian Art of healing, and to make it able (as they fay) to help and cure all difeafes came in, or rather went before them, into mans body; The Egyptians ingreat fayour too with nature both for their foil and bringing up,
fo notably commended above all nations, (having for example, to move and reach them even the great weight of the, world as Sr. Iohw Heydon faith) for wits to devife, and bodies to put in practife.

Whereby in fhort time they unfolded the:knot why the Minerals were of greatelt force and power againft difeafes; and foon after, which was a divine light, and in-fight, they perceived the huge labour of feeking fuch a hrge fort of fingles and mixtures to be vain and empey, and pirtiful among wifemen.

Becaufe firf, there is nothing hurtful and a breeder of difeafe, but it hath the heal and remed for the fame about him: For the mings and feet of Cantharides, the Fruit of the Root Bezar, the Afhes of Scorpions, Toads, and Vipers; and divers other flonger poyfons, borh by natare and skill dreft and prepared, do cure and heal their own and all other Poyfons; nay as all ftronger likes do cure their likes thronghour the whole world of difeafes, even fo when a man hath found out the thing that hurts him, he may by eafie skill mingle and break the cemper of the fame furrher ; that is, make it able to eat ap and confume it felf as eafily, without any further doubt, toil and labour ; But efpecially becaufe there is no one thing in the world, take what you will, that hath not the vertues of the Planets arrefted and faftened upon it, and alfo of the qualities thereof within it \{elf, that is not as good as all, and may ferve inftead of all, and that is not able to cureall difeafes; which thing weighed, and with difcourfe of wit and reafon fully reached, they went to practife, and by the Jike fharpnefs of wit, they found ont the kindly and ready way to drefs and make fir thefe thee kinds of Medi-ines aforefaid, whi. h contain all the Art of healing, all the reft are but waft words and grievous toyl, to tire a world of wits abour a bootlefs matter, as faith Des Cartes. But efpecially they reffed in the lafty which is enough alone, and yer nor without great forecaft, to chufe one of the beff, and that the very bell of all, fre their eafe indreffing. Though Dr. Culpeper of late was not content with this, bur ran through the relt, afivell to fpire his enemies, the Colledge of Phyficians, as to make himfelf famous in Taverns and Alebouses, as Paracelfe in his time did : whole lfeps he ftrove to follow againf therule of Rofie Crucianmifdons and vertue;
and the example of his anceftors.
But hath every thing all the verues and influences taken from the Planets, and Stars by the Moon, to the eat; That is, all the caring and healing power of all the things in the world ? very well you mut remember that I proved above all the vertues and powers of heaven, poured down through the Influence of the Moon, upon the fe lower creatures,' o be nothing elf (as Captain George (19) anon truly faith ) but one fell fame life and Soul, and heavenld hear in all things, And again, that all difeales flow from diftemper, and as it were difcord of the Natural consent of the body; then that thing which is endued with tore of life, and with exact and perfect temperateness, created upon both a fubtile and ftrong body, (which the thing in the bottom is) able alone by fubduing his weaker enemies, thole diftempered difeares, by ftrengthening his fellow life, Aurum Potabile, in our bodies. And lafly, by orderly binding together the frame that was flip out of order, to do as much as all the powers and forces of all the Plants, weights, and minerals in the world, that is, to put to flight all trouble of difeares, and refore the body to perfect health and quietness.

But how is all this done? we talk of high things, and huddle up roo many great matters together. It were good for us to work them out diflinetly; when this Aurum Potabile we Speak of, and Itrong tempered medicines, flip into the fomach, it fayer no long digeftion, being already digefted, nor look for any ordinary paflages to be opened unto it, but as foo as it is railed out of fleep by his fellow, the natural heat, by and by he flees our, and showers about, as fath as the Dolphine after his prey, or as manure her elf, whom Mr. Cooker; as I take it (faith) to pierce bounds, and all to the purpose, that is to reek his like food, and fuftenance, whereby to preferve his fate and being, which is the purpose of all things in the world, as was fad above.

Now there is nothing fo like and need a perfect temperature in the world, as the Etherial firft moif future in man; Bur what this is, you may read in my book entituled ariberin Vertus magnus.

This is bet and mot in the heart, the root of life, then thither it heth and preyeth upon that part firft, and that is the cause why
it prefently refloreth a man half dead, and as it were, pulls hfm out of the throat of death; thenit runs to the reft all about, increaling by that means the natural hear, and firf moifture of every part of the body; when this is done, he turns upon the parts themfelves, and by encountring with them in the fame fort, according to his might, feeds upon them, and brings them a certain way towards his own nature, evenfo far as we will by our ufage fuffer ; for if we take ir with meafure and difcretion, it will b:ing our body to a middle mean and fate, between his own exact temparature and the diftemper of difeafes, even a better flate then ever it had before; if we ufe it out of meafure, it takes us up roo high, and too near his own nature, and makes us unmeet for the deeds of the duties of an earthly. life. But in the mean while in the midft of this work, we mult know that by his exceeding heat and fubtlenefs which is gotten by Rofie Crucian skill, and which make up the ftrength above all things, it divides and fcatters; like fmoke before the wind, all diltempered and hurtful things, and if they cannot be reconciled and turned to goodnefs, nature throws them our as dead; and unfruitful leavings.

Bur how do we ralk, (as Mr William Tub the Aftrological Fercer faith) So much of exait and perfect temper, when by the verdict of all the Queft in there cafes there is no iuch thing found in nature, but in heaven onel? neither heard you me fay thar it floated alofr, bit was funk to the bottom of all nature; notwithftanding by a true and Holy Rofe Crucian to be founded and weighed up. For as heaven was once a grofs and difiempered lump (as I rold you in my book of the nature and dignity of Angels) by the divine arr of God that ordered all things (as you have read in the Introdectory part of rhis book,) refined and findred away round to the place and nature where it now fandeth; even foone of our grofs bodies here below, being a piece of the fame lumpalfo, and all one with that which Heaven once was, may by the like arr and cunning be refined and parted from all hisdifempered drofs and foul droffinês, and brought into a Heavenly nature of the beft and goodlielt thing in Heaven: And yer you mult not rake me as though I would have the mind and wit of man, which is but a park of the divine great mind, (I fpake
in my book called Ventus Lingens) to be able to reach theexcellency of his wook, and to make fo great perfection; if he do bot fladow is, and make a Counterfeit, that is, if he reach not fo far as to make all things, but romend a few by this his Heaven, all is well, it is as much as I can look for at the hand of any man that is noc a Rofie Crucian. Now is the time to ref a little, and pray for the good ure and practice of thofe that thall read our writing.

## CHAP. XV.

Of the Rofie Crucian Sun, or Spiritual Oyl. Of the Divine Works of
 dicines Rofie Crucian and Grecian. Of Poifon. Of the Supernatural Miracles of the Rofie Crwcians, with obedience to Reafor. Anotber Medicine of Supernatural effect. Of the power and $\varsigma_{s}$ cret skill of Nature. How to diffolve Minerals: And bow to prepare themfor Mens Bodies.

EUgenius Theodidact us hath Thewed you this Heaven, Nay this Sun of ours, which is nought elfe, as I told yonin one of my books of Aftrologie, but an Oylfull of heavenly Spirits, and yer in Qualicy of his body juft, even and narural, fine and piercing, clofe and lafting, able as well to rule this little World, as Mr. Thomas Heydon faith, the great $S_{n n}$ is able to governe the great Worid.

But what is he, faies Mr, Iohn Clecveland, that can fee this $\mathrm{D}_{\mathrm{i}}$ vine Arr and Way, whereby God made his grear and mighty work,viz: בדאץ as I hhewed in my Book,intituled, Mofes Speech to. God, upon the fecond chaprer of Genefis? or if he faw it, learne and match ir by imitation? I aniver, None but Rofie Crucinus, to whom I am a friend, and they God hath enlightned and uniealed their eyes, they hive found the way lying open in all places, and in all Natural changes, they fee them pafs and travel, I fay fill, the courfe thay Heydon calls foft and witty, that is, kindly fepatation: and if he be not fwift and rafh as many fuch as Thomas

Vaughan and Street, but will have fober patience, his own skill and labour will be bur little if he pleafe; for Nature her felf very kindly will in her due time performe all, and even all that heavenly workmanthip be eafily performed; and yee I mean not fobut that Art muft accompany and attend npon Nature (though. with $n$ ) great pains and skill) borh forwa:d and backward in this Journey (Doctoin Frexch knows my meaning, fodoth Doctour Owen, if his angry Cenfure will fuffer his Natural judgement) until he come to his withed reft, and to the top of all perfection.

If you perceive not, confider the way whereby we made our Ether in our book abovenamed, and matched our own firf moifture, a thing Etherial, I fay, and almolt Temperate; mark what I fay, there is a further end in the matter, hold on the fame means whereby you came fo far through The mife mans Crown, and are gone fo far in the Way to blifs, whichis that I fake of, and you may reach it.

Then you fee the way to cure all difeafes by the thitd way of Egyptian healing, which they doe, and we may well call it the Egyptians Heaven, and yet it is a way far beneath the Rofie Crucian Art of Healing, as we hall thew hereafter.

But if they will not yeeld yet to reafon, but mutter Ail Thomas Street-like, that thefe Heavenly. Medicines of ours are very high for the reach of mens filly wits, here itrowed below upon the ground for other leffer and baler ufes, and that no man fince the firft mani,or if I will fay Mofes, was the firft, that firft found out there inventions as they call them, after $A$ dam; and that none but the fucceffors of Mofes have been ever yer known to have found and ivrought the fame; I will not fand to beat reaton into fuch giddy-braindmen, but go tothe orhet two waies of healing, which the Egyptians found out and ufed, and called the firt Mineral Me-dicines, and thefe Mofes taught the children of Ifrael in the valley of mount Sinai, when he took the Golden Calf which he had made, and calcired it in the fire, and ground it to powder, and incorporated it with a Solar Veagle, and made the children of Ifrael drink Aurum potabile.

And the next myfteries and fecrets, as may appear by Riverius hisfpaking of Rofe Crucian Secrets, we fitly may call this fecond

## Rofie Crucian PH Y S IC K.

kind, becaufe that is too large 2 Name (if it be lawful for us as 3 well as for all other Learued men, where a fit word, wants to make a new) we may do ivell I fay to call ic a Cure it felf, becaufe it is by that way of healing, whereby every felf fame thing further broken may cure it felf; and this inward and hidden thing as they fay, the outward and apparent by the courfe of kind, whereby the Atronger like eates up in criall and confumes the weaker.

If this leave be once granted, we will borrow a little more for the other two likewife, becaufe their names, are not pertinent to our purpofe, and call thar Heaven a Cure-all, for fo ic dorh; and the next a Cure-the Great, becaufe the Order of the Rofie Crucians is alwayes to match the greater and more fubborn fort of difeafes with the Stour and mighty minerals, and the reft with thore hidden cure-themelves, ot ar lealt in the lower rank of lighter difeafes, with their likes, onely raiv; as the Grecians ufe them, withour any curions dreffing.

Let us draw nearer a conclufion of the matter; becaule Grecians themfelves are able, and our Engligh Phyficians that learn of them, to cure the lighter forr of difeafes, and to heal all but the four aforefaid, we will leave the reit for them, and foler this fecond kind of healing go. called our bidden cure themfelves, and bendall our batteries againft thefe four which they cail incurable, and fee how by force of our Mineral Medicines, they may be cured: we: fee the Poyfoned firits and breaths of venomousthings, with what force they work upon our bodies, things in Nature fer againft them, and how rhey confume them; If you do not fee by imagination, reafon with your felves, if nor remember thofe above named, that hilled with their fight; Hear one or two more that work the fame by touch as violently. The Hare-fifha moft cold and dry creature ( ro omit that he makerh a mans headake by (ight) if youtonch her aloof onely with a faffe, that her venomous breath may go ftraight and round unto you, you die prefencly. The root Baazam in Paleftine, as Pythagoras writes, kills the man that handleth it, and therefore they ufed to make a dog pull it up (as Ben. Iobnfon faith) who thereby died imediately. To come into the body; that coflly poyfon Mr. Linacre talks of, that is in Nubia, and one grain kills a man out of hand, yet fay but a quarter of an hours working, and that one grain divided will
overcome ten men; I hope you doubr not but thefe mighty poyfons if they werelike in Nature to the four great difeafes, and by little and little to be born by Nature, and fer upon them, would be ablé eafily, by their great Arength to devour and confume them; or elfefure fuch heaps of poyfon as the Phyficians give us would nor dwell oo long within us, bur would par our life in a momenr. Now what are thefe poyfoned Vapour., but moft cold.and dry bodies, wrought and broken up by maturall mingling, unto great finenefs and fubtilenefs, by this peircing fiviftly all about, and by thefe contrary qualities overcoming? Then ler us take the floutelt Minerals; fach as are called Middle Minerals by Rofie Crucians, or hard juices by Mr. Berkeahead (ro leave the Merals for a better purpofe) be they poyfons, as G. Agricola faith, but what they be I care not, and after we have by meer working, cleanfed them and fripped them of their cloges and hinderances, broken and raifed themto a fine fubftance, then match them with their likes, the hurtfull things in our bodies, fhall they not let all the reft alone, and ftraightivay cleave to their fellows, as well as a purging medicines, and fo devour and draw them our by little and little? If there be no likes, I grant they will as well as thar, fall upon their enemies, or good juices, and feed upon them.

Then what do you doubr is not a Mineral body far better? And therefore if it be raifed to as great a finenefs, much Aronger in working then the gentle and loofe temper of a wight or plant: wherefore thefe our Mineral Medicines, and fome other forementioned Medivines and cure the great, as we call them, fhall in any reafon, work more violently upon their likes, then the natu:ral poyfons of Wights and Plants do upon their contraries, both becaufe the like doth more eaflly yield then the contrary, and for that the lighter here is the Atrnnger.

But if you carinot fee thefe things by the light of mind, open your eyes, and calt them a little into the School of Alchimy into the leffer and lower fchool, I mean of Germans, and you fhall fee the Schollars, efpecially the mafters,by ftripping the Minerals, and lifting up their properties; bur a few degrees, to work wonders; as to name three or four, by quenching the Loadfone in the oyl of Irom, his proper food, they make him ten timesftronger, able to pull a nail-out of a poft, sxc. And by this natural pattern they make

Artificial drawers, not for Iron onely, bur for all other things, yea and fome fo mighty, as they will lift up an Ox from the giound, and rent the arm of a Tree from the body, as Mr. Comer doth witnefs; who reporteth again char he faw a feh-drawer, that pulled up 100 weight of fieih, and a mans eye ont of his head, and his Lights up into his Throat and choaked lim. They make binders allo to gleno two pieces of Iron together, as caf as the Smith can joyn them To be fhor they make eaters alfo, that will confune Iron fones or any bard thing to nowght in a moment; they diffolve Goldinto an ople; they Fix Mercury with the fmoke of Brimftone, and make many. rare devifes of ir; And all thefe wooders and many more they do by certain reafon: I could tell you, if I could fand abour it. In the mean time confider, if thefe or any other fuch like Minerals were raifed higher, and led to the top of their finenefs and fubtlenefs, and marched with their like companions, or with their contraries, ii you will, thofe great difeafes inour bodies, whar ftirrs they would make among them, how eafly they would hew them, pierce, divide, wafte, and confume them ? But you mult alwayes have a feecial regard, thar the Medicines be nor liker our natures, then the narure of the thing that hurts us; for thenthey woild firft fatt uponus, and lec the difeafes alone, which heed is eaffly taken in minerals, things very far off our nature, faich Des C artes.

And with thefe experience the wonderful vertue of the ayl and water of Tobaces wife men. I have known do miracles with ir.

Whac is to be faid more in thefe matters? I think nothing, unlefs through the councenance of an idle opinion that reigns among them, they dare flye to the lafi, and of all orther the moft flender thetrer, and deny our ability to beak, tame and handle as we lif, fuch four and fubborn bodiec: (what) becanfe yon know not how to do ir, will you funconall men by your monld? wife men would firt look into the porver and Prength of skill and nature, and fee what they can do and meafure ir thereby, and not by their own weaknels; there thill you underfand, that there is nothing in narure foltrong and flubborn, but it hatheits match ar leaft, if bothis overmatch in Nature, fuch is the nature of mans body, of his Sowl of fagnatures of Planis, of mettals, and miverals, and osther things alfo.

But admit fomewhat weaker as Herbs and Plants, \&cc. yet this, if he get the help of a wifemans Art unto him, Thall quickly wax great and mend in ftrength and be able eafily to overcome, that other; mark how the dregs of Vinegar, a thing fprung out from a weak beginning, and it felf as weak as water, is able ifir be bur once diffilled, to make fouter things then minerals even mettals themfelves, all but filver and gold, to yield and melt down to his own waterifh wature, nay which is more then Mild-dew of Heaven, as Mr: Cooks the Vicar calls it, wrought firt by the Bee that cunning beaft, and then, twice orthrice by the difiller, diftilled will do the fame, you may judge with your felf, what not onely thefe, but other fiercer and fharper things, as Salts, \&c. more like to do upon Minerals; and by the way confider, if fuch mild things as wine and honey, fo meanly prepared; are able to fubdue in that fort the moft fiffe and tough things in the world, fo minerals cheaper then Arirum Potabile, in their higheft degree of dignity would cure the fouteft difeafe (being prepared fitly) that can grow in our bodies. Now let us fir andtake our reft a little and then we will concludeour Rofie Crucian Medicines.

## CHAP. XVI.

How the Rofie Crucians make a Chirurgeons inffrument; that it Shat pierce through any part of the whole body, whout fenfe or feeling, and fourd the depth of a ivound. The difference of Common Phplicians Raip, Blunt, and herby medicines, and Rofie Crucians: What a Phyficianought to be, what they ought to learn, and what they ought to prattife, and then I fhall love them of the order of the Rofie Crofs.

BUle I wear away time in vain, to fpeak fo much about tils imatter; andyer fith all are not of like Capacity, I will adde onc yerfamiliar example; when a Surgeon goeth about to fearch a wound that is deep, if he thrult at ic with a Butchers prick he ivould nove Laughter; let him take a Thonse, and it wil pierce Tomewhit piettily; but to do it throughly, and at his pleaftre he will vife, (though to the great grief of his $P_{\text {atient }}$ ) a fine and long inftrument of Mettal. But a tight Surgeon the common ones are but Butchers, fuch a one as is a Phyfician, and Aftrologer, nay a Rofie Crucian alfo, would touch his Inftrument, with a Loadfone, that is commonly found, to make it pierce throughout the body without all fenfe or feeling ; Even fo good Phyficians fuch an one, as the Lord Marques of Worcefter had, whom he taughr many fine invenrions: he told me of a Golden ball that this Lord made, that let him throw it into a River of Pool, it would arife aagain from the bottom at what hour he pleared. This noble Marques thewed me a key of the lock, that would tell him who couched it. Nay if is fortmed to be pickt he could know who did it, and what was taken avaly (bifortheio fares) and many rare chings I have feen chis princely Philofopher do, which his excellency was pleafed to fhew me; fuch asthere are hard to be found in this Government, where none of thefe can live without great envie. If one of thefe Rofic Crucians be to encounter with our grea telt enemies, thefe four we fpaak of, he would not Ihope, if he were a true Rofie Crucianbe fo mad as to thrult at them with the Raw and blunt

## Rofie Crucian PHYSICK.

blunt Herby Medicines fuch as Dr. Scarborough, prefrribe, no nor although they be fharpened by Iacob Hey don, by plain diftillations : neither would he, $\cdot I$ think for pirty, fting the poor patieni with Eugenius Philalethes Martyrdome of rude and rank Minerals, and unlefs they were made into a fine clean natural and temperate quality, which would work mightily, and deltroy either of the fe four grear difeafes, Leprofie, Gout, Dropfie, and Fallingfichnefs: but feed, Comfort, or at leait not offend, and hurt his parient; they labour in vain that practile otherwife. Thele are the medecines which I onely ufe, and which a good and wife Phyfician onghi onely to feek and follow, and if he cannot find it, let him ufe the cure themelves. But fuch a thing as this, I fay, brought to this equality; and finenefs of frame and cemper, (ivere it at the firft, might, lant or mineral) was it which our father and founder Mofes, (the chief of the Rofie Crofs) faid is like to Heaven, and the ftrength of all ftrengths piercing and fubduing al! thing:.

This was it that warranted his Sons the rofie Cracians to avow fo foutly, that Art was long and Life fhort, and all difeafes curable, when IHippocrates the Father of Common Phyficians, was driven by the infirmity and endlers matter of his weak body, and envious mind tinctured with Coveroumefs, and fickle Medicines, rocry to Rofie Crucians, bur they would nor hear fuch hard-hearted Fellows, nor give him long Life, he faid therefore that Art was long, and Life was fhort. And whereas he and his of-fpring were fain to leave many difeafed helplefs, to the great thame of Art and Plague of mankind, is it any marvel when as they prich at them (as I faid) with a Burchers-prick? Nay, fee whit they do by their prastice, they be fo far from all helpand comfore to the Parient in greareft danger, that they increafe his wifer eys many waies, excepr the great eater of all pain, and their common Medicine Death, be gnickly adminiftred: Firft, they make the Parient fuffer the punithment due to their own florhfui Idlenefs, burdening his fomach with that labour of loofnening and fundering the Fine from the Grofs, which they fhould before have taken into their Glaffes: and then by doing there often, they clean tire his feeble Nature (as it wonld rire a ho-fe) when as by fripping the foul and grofs fuff, that dulls the working, and reteining the

Vertue in a narrow ftrong body, they might doe as much at one time as they doe notv in twenty, and becaufe their Medicines applyed are of fmaller power and weaker than the things that hurt us, they feed nourifh and ftrengthen the difeare and ficknefs, but for all this, if fome of this company and fide ofLeeches have been and are yet fometimes able to heal all difeafes in our body (though with much ado, as you have heard) fave the four named remedilefs, yea andthofe afivell in their fpring as before their ripenefs, as they themfelves reporr. Is there any Proportion in Geometry? Let the College of Phyficianslay meafures why the Rofie Crucian mighty Medicines which I call Cure-the-greats, paffing thefe in power, as much as the ripenefs of a difeafe is above the Spring, fhall not overmarch the ripe as well as the green Difeafes: Wherefore there be no doubts left, but this plainly true, Thar albeit the Grecians is weak and halting in this kind of healing, yet is the Egrptian, or (as now they terme it) the Paracelfrans and Mineral skill fufficient to cure all difeafes: Then I have paid the whole fumme of $\mathrm{m}_{\mathrm{y}}$ promife, touching the fecond means and helps to Blifs and Happinefs, which is Life and Health.

Before I clofe, I think it very meet, while the time and place very fitly ferverh, to do a good deed, and this fhall be my intent to admonifh and exhort the Grecian Leaches, and their Sebolars the English, Spanish, and French Phyficians, whom ifthey follow Hippocrates, Plato, Pythagoras, and his fellows, I love for their Learning, and pitty for their mifleading,others , (although it be grievous, I know to old Scholars, wone in a kind of Learning, to unlearne all as it were and beginagain, for theirown Credir and Virtue, yea and profit fake alfo, if they efteem that beft, to leave thofe Gilded Pills and Sugred Baits, and all other crafty fnares, wherewith the World hath been fo long caught and fo long tormented, and to feek this onely heavenly Suciery; as (to you that are learned) eafily may temper your felves, and be acquainted with the ready, true, plain and certain way of Healing difeafes. I think in former rime they were nor greatly to be blamed and accufed but of dulnefs and we.aknees of undertanding, in not applying and feeing this pertection, and fupplying of all their wants; but fince they have been fo often warned not
with words only, but with examples of Learned nuen, Matheolus Fernetius, Scoerinus Danis', Pbilo Iudau's, Diodorus Siculus, and other fuch like which have and doe revolr, and flie away from them daily, yea and by the certain deeds of Paracelfe, it were imqity to fit fill : Well, fetv words will ferve to wife and vertuons Phyficians, fuch as are of themfelves forward.

But there is another, and I am afraid, the greater fort, lefs honeft, more Idle and Covetous, full of windy Pride and Words, but empty of all good learning, and they are no friends to Rofie Crucians, nor they to them, and thefe no gentle warning of any, no though a Rofie Crucian himfelf fhould come and bring Trath her felf along with him in perfon, would prevail: who care not it feems if halfmankind hould perifh for want of help and fuccour, rather then lofe their gains; And which not onely feak foully but write foolifhly, againft this overflourifhing vercue, but alfo like the giddy people of my time, where they catch the State, banifh the menthat hold and.poffers it; whereas if it were a good Commonwealth (quoth Arifotle) the matter wonld be fo far from Banifhwent or Imprifonment, as they would efteem fuch a man as well as the Laws (for he is himfelf a Law) exempt from all obedience, and judge him worthy to be followed and obeyed as a perpetual King.

This untowardnefs and crookednefs in men caufodall our Al-, healing Ancefors the Rofie Crucians fromtime to time, never to abide their Sencence, but to the great hurt and lofs of mankind go into willing Banifbment, you have eftablifhed a kind of Government among you (to purfue the fame, like a little ------) wherein you rule alone over the weak and forry fubjects of mens Bodies, then their health and fafety yo ought to feek onely, befides enough to maintain a contented eftare alfo, which Plato allowes his Governours, and not profic only (that were Tyranny) both for humanity and Religion fake, for to omit Religion, which they do lightly omir, if a Phyfitian begin once to make a prey of men, he is not onely no man, but a molt Fiarce and cruell Beaft, not fic to be compared and matched and matched any where, if you feek all over the world as with the mithapen moonfer of India, which Ariftot le delcribes, and calls Martichora, which being by nature or cultome, I know not whether,
ther, very greedy upon mans fleth, is with manifold and wonderfull helpes furninhed, and armed unto ir.
Firt with a face like a Meina voice like a Trampet, two fit things to allare and call him in) and then if he flye, wirh the fivitnefs of an Hart to overtake him, he darts like a Porcupine, to wound him afar of ; and with the tail of a Scorpion, as it were a poyfoned Shaft, near hand to ling him : furchermore, left all this might not ferve, by occafion of Armour, he harh feet like a Lion, fiercely and cruelly to tear him, and three rowes of teerh, on each Chap for the in devomsing. Apply you and the Apothecarties, the reft your relves, in fecret for my part, as I am nor a Rofie Crucian, fo I am as well as they, forry to fee evil done. And I am loath to fpeak evil of it, and fure were not the great grief and envy I dobear ; and alwayes did, to fee defert trodden down by fuch unworthinefs, and fome little hopes I have to hear of the amendment, and in of the return of the truch, and good menour of banighment and imprifonmene, you hould have found me in Weftminfter-Hall: as I have been an Atturny in Termetime, and mean to continue my practife there fo long as I live, except in the Vacation, which I intend to fpend in Chimical and Role Crucian Medicines

But fome may ask what I mean by R.C. the Ceremonie is an Ebony Crofs, flonithed and deckr with Rones of Gold, the Crofs, typifies Chrifts Iufferings upon the Crofs for our fins, the Rofes of Gold thew the Glory and Beanty of his Refurrection from death to life. And this is carried to Mefque, Caflle, Apamia, Chaulatean Viriffa Caunuch, Mount Calvery, Haran and Mount Sinai, where they meet when they plenfe? and make Refolation of all their Actions, and then difperfe themfelves abroad, taking their pleafure alivayes in one of there places, where they refolve allo all quelions of what foever hath been done, is done, or fhall be dowe in the world, from the begiming to the end thereof. And thele are the men are called Rofie Crucians.
